

## Measure

### Measure & you will know.

Whether you use a local professional EMF consultant or do it yourself, our Body Voltage Kit (BVK) lets you measure the 60Hz (50Hz) AC electric field being induced into & through your body daily. 1,000x more sensitive than an electric field meter the BVK can measure the circuits in your bedroom, empower you to create an EMF mitigated sleep sanctuary & monitor/reduce in home EMF exposure.

## Understand

Our web site has reading & video material to help you understand the measurements plus you can call us.

## Mitigate

The #1 way to reduce daily in home EMF exposure is to switch off/cut off the source. A UL listed EMFSafe remote cut off switch allows you to do this simply & safely **with the push of a button.**

## Mend

People with an EMF mitigated sleep sanctuary sleep better - have more energy, experience symptom relief & heal faster.

### The EMFSafe cut off Switch

is manufactured In America in a 508A UL listed industrial panel shop, is code compliant in all 50 States & Canada & will not jeopardize home owners insurance.

**Be safe.**

There are the four types of in home EMF (electromagnetic fields):

Electric Fields +  
Magnetic Fields +  
Radio Frequency +  
Dirty Electricity.

## ALL EMF is Cumulative

& can affect health

**The best way to reduce EMF exposure is, whenever possible, simply SWITCH IT OFF, especially at night. In an EMF mitigated sleep sanctuary most people experience better sleep, more energy & therefore better health.**

## SLEEP

**IS THE FOUNDATION OF  
GOOD HEALTH**

& Optional Whole House "DE" PQFilter

## EMF & Health

With the push of a button turn any bedroom, home office, den etc. into an EMF mitigated safe sanctuary & Live EMF Safe

**Doctor recommended**

**UL listed & Manufactured in**

**America by EMFSafe, Inc**

**[www.LiveEMFSafe.com](http://www.LiveEMFSafe.com)**

**Use our Body Voltage Kit (BVK) & make an informed decision.**

Don't guess, find & measure the electric fields in your bedroom, home office, den etc. & be empowered to make an informed decision. You only heal at night & cutting off the circuits that affect your sleep area reduces electric fields, magnetic fields, "dirty electricity" & RF facilitating better quality sleep & better health.

**How bad could it be?**

The Building Biology Institute (BBI) says a body voltage reading in the sleep area of below 10mV is of no concern & 10-100mV slight concern. We have seen readings over 7,000mV before mitigation, what's yours?

**Mitigating Modern Exposure**

**EMF & Health - Doctor recommended**

EMFSafe is proud to have many medical Doctors both tradition & functional as well as other health practitioners as affiliates who recommend the EMFSafe remote cut off Switch to set up an EMF mitigated sleep sanctuary to facilitate better sleep, more energy & faster healing.

**Don't believe us - take the 6 night challenge**

All you have to do is manually turn off all the breakers to your bedroom & the rooms next to it (plugs & lights). Within 6 nights in an EMF mitigated sleep sanctuary, MOST people are sleeping better, feeling more energy & their symptoms start clearing up - prove us wrong.

**EMFSafe remote cut off Switch**

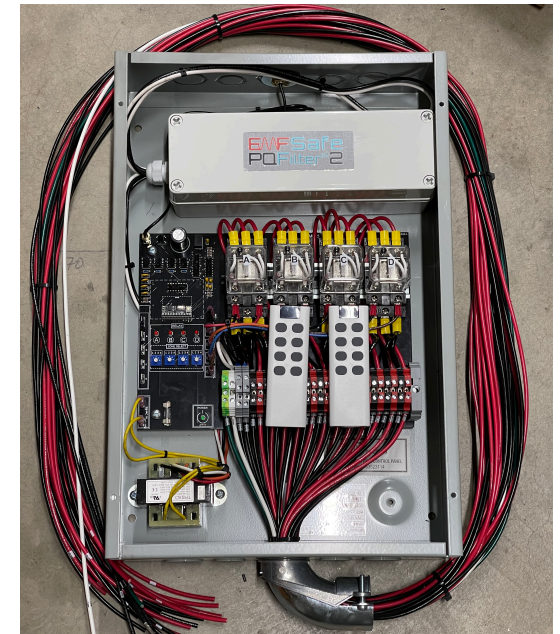

The simplest, safest, most efficient & effective, the most measurable & scientifically supported way to reduce in home EMF (electric fields, magnetic fields, "dirty electricity" ("DE") & radio frequency (RF) is cut off the circuits they come from. Especially at night when most of these circuit do not even need to on and when the body is trying to heal.

**Whole House "DE" PQFilter™**

The EMFSafe optional built in Whole House, all circuit, 24/7 "dirty electricity" (DE), Power Quality PQFilter™ is a capacitive/parallel filter, just like most other popular whole house (& plug in) "DE" filters on the market but at **half the price.**

NOT A KIT

Shown NP-4/4 PQ2 - 4 relays for 4 Neutral & Power (NP) circuits with 4 Flex Zones™ & a Whole House "DE" PQFilter. Comes in your chosen enclosure, with "pig tail" of wires ready to install. UL listed so code compliant in all 50 States & Canada (ask your building inspector) & will not jeopardize your home owners insurance (ask you Agent).

Installation is required by a licensed electrician, time will vary depending on type of enclosure and size of switch. For more information visit our web site: [www.LiveEMFSafe.com](http://www.LiveEMFSafe.com)
