Bid/RFPs (comparable)

Bids & RFP's notifications (US & Canada) - similar to the other services - posting open solicitations with the inclusion of bid documents and instructions for submission. Our differentiator lies in the filtering capabilities and timeline of posting (any updates, awards, bid protests, final contract value).

Features Unique to GovSpend

Spend: Our flagship product

We are the ONLY company to track public spending. You can see exactly which FED/SLED agencies are buying what you sell, who they buy from currently, pricing and every Purchase Order issued from prospect to vendor. You can even search for competitors to see their customers and sales. This includes the vast amount of spending that goes on outside the bid/RFP process.

Quote Requests

You can see which vendors have been awarded contracts and which agencies have issued contracts for what you offer. We provide the scope of work for the agreement as well as the expiration date of the contract and any included documentation.

Co-Ops & Contracts

You can see which vendors have been awarded contracts and which agencies have issued contracts for what you offer. We provide the scope of work for the agreement as well as the expiration date of the contract and any included documentation.

Contacts

We have requested the contact information for every employee at an agency, which we aggregate into its own search engine. From there, you can filter by Title to the people that your team needs to speak with or see a top-down list of contacts within a specific agency. We will then provide you with the Names, Titles, Email Addresses, and often physical addresses for these contacts.

*NEW Federal

With our recent acquisition of Fedmine, we are now able to provide the most in-depth federal data and market solution. Pulling from 17 different data sources, Fedmine allows us to provide what is considered the largest accessible library on federal spending information available today.
