

Governance. Risk. Operational Readiness.

Preventing Accessibility Failures Before They Become Incidents, Lawsuits, or Headlines.

Led by Dr. Yvette Pegues, Ed.D. — accessibility governance engineer and systems-focused advisor helping executive teams reduce risk across products, processes, and property.

Executive Accessibility Governance for Aviation and High-Visibility Systems

- The team’s relevant experience and perspective:
- Executive advisory focused on accessibility governance, risk controls, and operational readiness
 - Systems and engineering discipline applied to real-world accessibility failure modes
 - Experience working across complex stakeholder environments (ops, legal, CX, vendors, infrastructure)
 - Doctoral-level training in inclusive systems + lived disability expertise that surfaces what audits miss

We provide Executive Aviation Advisory and advisement for airports, airlines, and high-visibility infrastructure teams who need accessibility governed as operational risk

– not treated as training, PR, or a checkbox.
