

Put AI to work in the business you already run.

AI readiness. Agentic systems. Proven results.

Most established companies aren't using AI well yet, and many aren't using it at all. That gap shows up as re-keyed data, spreadsheets only one person understands, slow quotes and reports rebuilt by hand every week. **Victory Analysis** is a founder-led Chicago firm with eleven years of experience building and implementing advanced AI. We learn how your business actually runs, then build AI that fits it, with a person approving what goes out the door.

Proven results

75%

of Excel worksheets automated

Chicago trading firm. We automated three-quarters of the team's Excel worksheets and built automated dashboards and calendars that stay current without manual rebuilding.

0 → 1

social media team, built from scratch

Chicago small business. The business had no social media team. We designed and built an automated one from the ground up.

How we help

SERVICE	WHAT IT LOOKS LIKE IN YOUR BUSINESS
AI readiness & roadmaps	Find where AI will pay off first and what needs fixing before you invest, then follow a step-by-step adoption plan with measurable targets.
Agentic workflows	AI agents that handle invoice and PO intake, quote drafting, order-status replies, unpaid-invoice follow-ups and social media, each with a person signing off.
Spreadsheets, data & dashboards	Consolidate the spreadsheets that run the business, automate the reports and get a weekly owner's dashboard covering cash, orders, receivables and margin.
Modeling & machine learning	Forecasting, pricing and demand models, plus causal analysis that shows what is really driving results, validated before you rely on it.

Built for established businesses, not tech companies

We work with owners and operators of Chicago-area manufacturers, distributors, contractors, trading and professional-services firms, and family-run businesses that run on Excel, email, phone and paper. You don't need to be a software company, and you don't need to replace your systems.

How an engagement works

1. Assess Walk through your systems, find the costliest manual work and size the savings.	2. Pilot One workflow, 30–60 days, a numeric target and a person approving every output.	3. Scale Extend what works, train your team and hand over full documentation.

Questions owners ask us

QUESTION	STRAIGHT ANSWER
Do we need new software?	No rip-and-replace. We build around Excel, QuickBooks and the systems you already run.
Is our data safe?	We start with approved tools, written rules on what customer, employee and financial data never goes into AI, and staff training on AI-driven fraud.
Will this replace my people?	It takes repetitive work off their plates. A person stays in control of every output, and your team's know-how gets written down instead of walking out the door.
How will we know it worked?	Every pilot gets a numeric target up front: hours saved, faster quotes, fewer errors or cash collected sooner. Results are measured before anything scales.

Hands-on We work alongside your team, from first conversation to working systems.	Bespoke Built around how your business runs, not a cookie-cutter playbook.	11 years of advanced AI Experience developing and implementing AI, brought to every engagement.
