Checks can be mailed to:

1990 McCulloch Blvd D1116
Lake Havasu City, AZ 86403
Or

Paid through emailed link

POOL MAINTENANCE AND RECOMMENDATIONS

AFTER

HIGH WINDS OR A STORM

It is important to maintain your pool in between scheduled cleanings. We recommend that every pool has a vacuum to help keep the dirt and leaves off the bottom of the pool. We will typically only vacuum on an as needed basis at no additional charge. If you would like your pool vacuumed weekly, it can be arranged for an additional charge of \$50.00 per month.

Skim the Pool- Remove large items that may be in the pool and skim any debris floating on the surface. Leaves and dirt are full of phosphates and can cause algae to grow as well as cause staining.

Check the Baskets- Clean out the skimmer and pump baskets so they are not clogged with debris. If the baskets become clogged this can cause the pump to overheat and burn out.

The Importance of Circulating your Water

Ensuring water circulates 6-12 hours a day depending on pool size, usage and temperatures is important for maintaining the health of your pool

- **Circulation-** When the pool is being used more often, complete circulation of the body of water is especially important to remove smaller particles, oils and debris.
- **Disinfection-** When chemicals are added to a pool and for them to work properly, they will be distributed across your pool more evenly
