Why Should You Drain Your Pool?

The few most common reasons to drain include: poor water quality due to an overabundance of Total Dissolved Solids (TDS), High levels of Cyanuric Acid (CYA), or a High amount of Calcium Hardness.

TDS, or Total Dissolved Solids, measures all the substances dissolved in your pool water. Everything that you add to your pool increases the TDS (Even the Tap Water) When the TDS levels get too high, you start to lose the ability to balance the water properly.

CYA forms a weak bond with free chlorine in the pool water, protecting it from the sun's ultraviolet rays to reduce chlorine loss. With CYA levels being high, it can also reduce the effectiveness of the chlorine.

Calcium Hardness is a white film that forms on the water line of your pool and if levels are high it may worsen and must be taken off with Soda Blasting.

(If you would like to be added to our list for a drain this winter please call our office number!!)

SERVICES WE PROVIDE:

**Weekly Emailed Reports
Filter Cleanings
Pump Repair
Heater Repair
Pool/SPA Lighting**

**System Automation

Stand-Alone Hot Tubs**

Extras:

**Extra Cleanings
Twice weekly Cleanings (VRBO)
Water Testing
Super Stain Out
Calcium Maintenance
Hot Tub/Pool Covers**

Patriot Pride Pool Cleaning DBA Paulson Pool Cleaners | October Newsletter

LOWER TEMPS = LOWER MONTHLY BILLS!!!

TIME TO TURN THOSE HEATERS ON FOR WINTER!

Please ensure that the pump area is clear of debris and leaves as it may put more strain on your equipment.

(If assistance is needed please contact our office and for a fee we can send someone out to clean up your equipment.)

The use of your swimming pool is not only limited to the summertime in Arizona! Heating the pool in Fall/Winter is the best way to extend the swimming season and keep the pool operating year-round.

If you do not want to rack up the electricity bill, another alternative would be a Pool Solar Cover!

(If you are interested in a cover, please call our office for a quote)

(We require all covers to be removed on your service day)

Tips:

- Pool Drains must be done under 80 degrees (Winter Only)
- Pump run times can be lower in the winter (1/hr per 10 degrees)
- Please call our Office Number for all Billing Questions.
- Filter Grids should last 2-5 Years and Cartridges 3-5 Years with the proper care and maintenance.
