PHOENIX EQUIPMENT COMPANY

Phoenix Gelcoat Standard Systems combine a resin pump, catalyst pump, spray gun, and control valves to accurately mix and apply gelcoat or resin materials. Known for their durability and precision, these systems are used across multiple industries, including marine for boat hulls and decks, automotive for fiberglass body panels, construction for smooth composite finishes, renewable energy for wind turbine components, aerospace for lightweight high-strength parts, and industrial applications such as tanks and pipes.

The system features the Phoenix “5000” external or internal mix gun, a resin pump with quick pin disassembly, and long-wearing pump seals. It includes the OptiSlave™ catalyst slave system, a micro-adjustable catalyst ratio, and stainless steel resin and catalyst pumps with “no-leak” upper seals. Built with hardened components and an easy-access control valve, each system comes equipped with a 25 ft (7.5 m) standard hose set, a spare parts kit, and a 1-year warranty.

Model	Output GPM	Available Ratios
Apollo	2.4	8:1, 13:1, 20:1
Atlas	3.7	5:1, 8:1, 13:1
Hercules	6.8	4:1, 7:1, 16:1
