PHOENIX EQUIPMENT COMPANY

The XT-1, “The Knob”, enhances the Phoenix 5000 by solving a common challenge in composite spray work: reaching tight, angled, or recessed mold areas with control. This precision accessory retrofits seamlessly, improving efficiency, precision, and operator comfort—making it a valuable upgrade for both current users and new adopters seeking production-ready performance.

The XT-1 is a patented directional spray accessory designed for the Phoenix 5000 system. Engineered to improve access and accuracy in confined mold areas, it installs easily and extends the tool’s capability without altering existing workflow.

How It Works:

Installs onto the front of the Phoenix 5000 spray head, replacing the standard tip orientation

Redirects the spray pattern at a fixed angle to improve access into deep recesses, corners, and tight mold geometries

Maintains full spray integrity and output, reducing overspray and eliminating inefficient workarounds
