PHOENIX EQUIPMENT COMPANY

The PHOENIX TRITON Multi-Color System: A pneumatically operated spray application system engineered for high-efficiency composite production. Designed to combine multiple color capabilities into one compact unit, the TRITON enables operators to apply up to eight colors without separate systems—reducing setup time, footprint, and maintenance requirements. The system is equipped with a PAH-3000-XP Heater, 3000-watt, 240-volt AC, single-phase, to maintain optimal material temperature and consistent spray performance.

Built for performance and longevity, the system delivers consistent and reliable material output while supporting precise catalyst control through Phoenix's advanced dispensing technology. Its durable, low-emission design ensures smooth operation, simplified maintenance, and long-term reliability in demanding production cycles.

- Pneumatically operated multi-color spray system
- Dual 2.4 GPM stainless steel fluid pumps (13:1 or 20:1 ratio)
- Phoenix 5000 external / internal mix gun
- OptiSlave catalyst slave system w/ micro-adjustable ratios
- Quick-pin disassembly & easy slide pump change
- Hardened wear components & stainless steel catalyst pump
- Several mounting options available
- Spare parts kit & full-color manual
