ABOUT US

- Kota Fire Fighting Company is owned System Integration company that specializes in the design, supply and installation of all Fire alarm systems (Conventional and Addressable), fire fighting systems (Fire Suppression, Hydrant and sprinkler systems, NAF, FM-200), Surveillance system (Conventional and IP based), Lighting control systems (Digital Bus), Access control and time attendance system, Home Safety and security systems,
- Kota Fire Fighting Company has been at the forefront of the Safety, Security and Automation Industry in Rajasthan since 2010. Excellent experience, knowledge and innovation in the industry ensure that we will satisfy the highest customer expectations. We help customers find the right solution at the right price. With over 5 years experience in the same industry we guarantee satisfaction!
- Kota Fire Fighting Company is differentiated in the marketplace because we focus on the creation of value for our customers. We believe value is created by providing readily customized Building safety and Automation solutions through our new product developments and improvements. When you deal with v you are guaranteed the highest level of service with high quality products and service that we stand behind. Kota Fire Fighting Company looks forward to working with you to satisfy your Safety, Security and Automation needs. Fire Fighting equipment in Kota Fire alarm system in Kota

SERVICES

Fire Extinguisher Services

Kota Fire Fighting Company is acknowledged as a leader in the business of active fire protection system (Installation, maintenance, training and distribution). We work across a diverse range of industries from retail to residential, sports stadia's to leisure complexes and hospitals to education institutes. When it comes to protecting your property and your people from the potential loss by fire, you can put your trust on us.

- **Fire Safety Services**

Kota Fire Fighting Company provide fully tested, proven and certified fire & safety equipment's for buildings & establishments under or post construction. Our fire & safety equipment range includes Fire Fighting Equipments, Fire Hydrant & Sprinkler System ,Fire Detection Equipment's ,Personal Protection Equipment's

- **Fire Hydrant & Alarm Service & Maintenance**

Kota fire fighting company have the capability to provide you an utmost fire service & maintenance package, tailored to your specific requirements. When you have a maintenance contract with kotafirefightingcompany you can focus on other aspects of your business. Because, we ensure your fire protection system & equipment's remain in good condition round the clock. We also put our mechanical & electrical engineers on standby 365 days a year – to ensure minimum down time for your systems in the event of an emergency

SYSTEM WE INSTALLED

Fire Fighting Pump House Designing

Design of Fire Fighting Plant room Including Diesel Pump, Jockey, Hydrant/Sprinkler Pump , Associated Piping ,valves and Automation as Per NBC and NFPA Guidelines. It also includes Internal/External Hydrant Sizing, Wet riser, Sprinkler Riser, Down Comer etc. The Service include Sizing Equipment , Pipe Sizing, Preparation of Bill of Quantity , Specification, CAD 2D Drawing etc

Hilti Core Cutting & Breaking & Dismantling Work

We are a leading organization of the domain, engaged in offering an effective array of Core Cutting & Breaking & Dismantling Services for customers. These offered cutting services are rendered using modern technology. Apart from this, these cutting services are rendered according to the client's demands

Hilti Chemical Re-baring & Anchor Fixing

We are applicator of HILTI. We are doing re baring and chemical anchor fixing. As well as We are specialists in all kinds of Chemical Rebaring & chemical & Mechanical Anchor fixing work

Fire Hydrant System Installation

we have been Supply and Installation of Fire Hydrant System. The offered system provides a powerful flow of water to extinguish fire. Our valued clients can purchase this Fire Hydrant System from us at a very reasonable price range from us

Fire Sprinkler System Installation

A glass bulb type Sprinkler Head will spray water into the room if sufficient heat reaches the bulb and causes it to shatter. Sprinkler heads operate individually.

First Aid Hose Reel System Installation

The complete hose reel is then “slide in” from the top and sits in a fitting and rigid position. The water supply piping is then connected to the inlet of the hose reel. The materials used in the manufacture of the fire hose reel are of the highest quality such as the combination of Grade 304 stainless steel, high grade aluminium alloy and/or LG2 gunmetal waterway assembly all of which are corrosion resistant and of high impact strength.

Fire Alarm system Installation

We supply and fit all types of fire alarm systems for all businesses and budgets in Surrey, All of our work is guaranteed for 12 months as standard. When the smoke detector picks up on smoke “ions” in the air it activates and makes a siren sound perfectly pitched to attract our hearings attention so we wake and get out alive. Say it here. Smoke detectors are either traditional battery powered or mains connected with battery back up.

Tube Fire Suppression System Installation

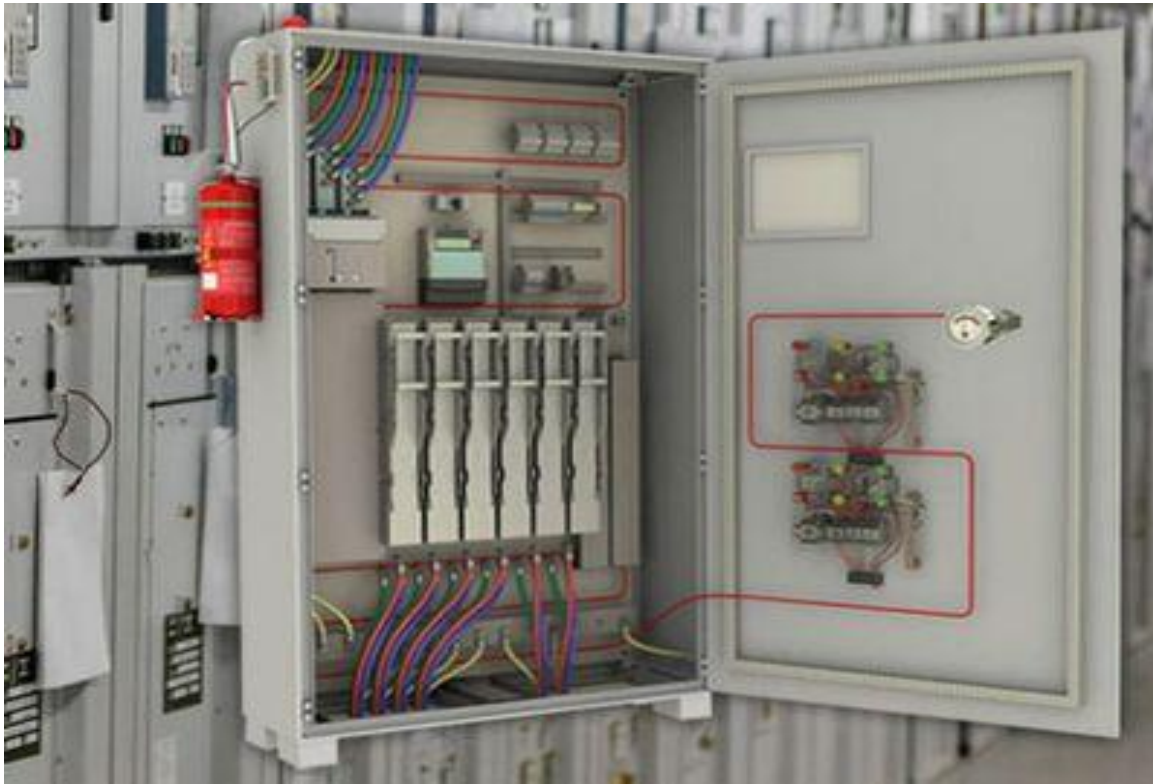

The Fire Suppression System, fire is detected through Fire Detection Tube (FDT) assembly. KATS is very useful in confined spaces when human is unable to extinguish the fire & quick operation is required. As soon as the fire ignited, the FDT senses the fire & Actuate the valve & releases the Extinguishing Agent. No external power source required. Easy to maintain, operational readiness, expansion flexibility.

100% effective & No possibilities of burn-back.

100% automatic & Full execution of system, so it doesn't required any human involvement.

Quick response system & It also extinguishes fire very quickly.

Very easy installation & Less maintenance required.

CO2 FIRE SUPPRESSION SYSTEM INSTALLATION

Carbon Dioxide Fire Suppression System consists of one or more bank of cylinder storage containers to supply the CO2 extinguishing agent. Flexible discharge bends or hoses connects the cylinders into a piping manifold. The manifold in turn distributes the agent into the piping network. Nozzles regulate the flow of CO2 into the protected area.

FM-200 Firefighting System Installation

Many fire suppression systems can cause major damage to and even destroy the very things they are supposed to protect. You're looking to avoid damage not cause it. You're looking to reduce downtime – not lengthen it. You want a fire suppression system that deploys quickly and cleanly and won't leave behind oily residue, particulate, or water. FM-200® fire suppressant stops fires fast. When you consider the potentially devastating environmental effects of an uncontrolled fire, it's easy to see that an FM-200 system is an important part of an environmentally responsible fire suppression solution

Foam Fire Suppression Installation

Foam Systems are widely used to protect flammable liquid storage, aircraft hangars, fuel loading racks, hydrocarbon bulk storage and many other hazards that require more than just water fire protection. When coupled with fire detection, foam systems suppress fires quickly and efficiently, limiting the amount of agent required. Read a success story about this solution.

Air Sampling Smoke Detection Installation

An aspirating smoke detector (ASD) is a system used in active fire protection, consisting of a central detection unit which draws air through a network of pipes to detect smoke. The sampling chamber is based on a nephelometer that detects the presence of smoke particles suspended in air by detecting the light scattered by them in the chamber. ASDs can typically detect smoke before it is visible to the naked eye. In most cases aspirating smoke detectors require a fan unit to draw in a sample of air from the protected area through its network of pipes, such as is the case for Wagner, Safe Fire Detection's proseries and xtrails ASD system

PRODUCTS OF FIRE FIGHTING SYSTEM

FIRE EXTINGUISHER

Portable fire extinguishers are made for smaller in size fires of A, B C & D type and very valuable in the early stages of fires which can be used by one or two person(s). The extinguishing medium are based on water or/and foam, powder, carbon dioxide and clean agents released by either stored pressure or pressurized charged cartridge

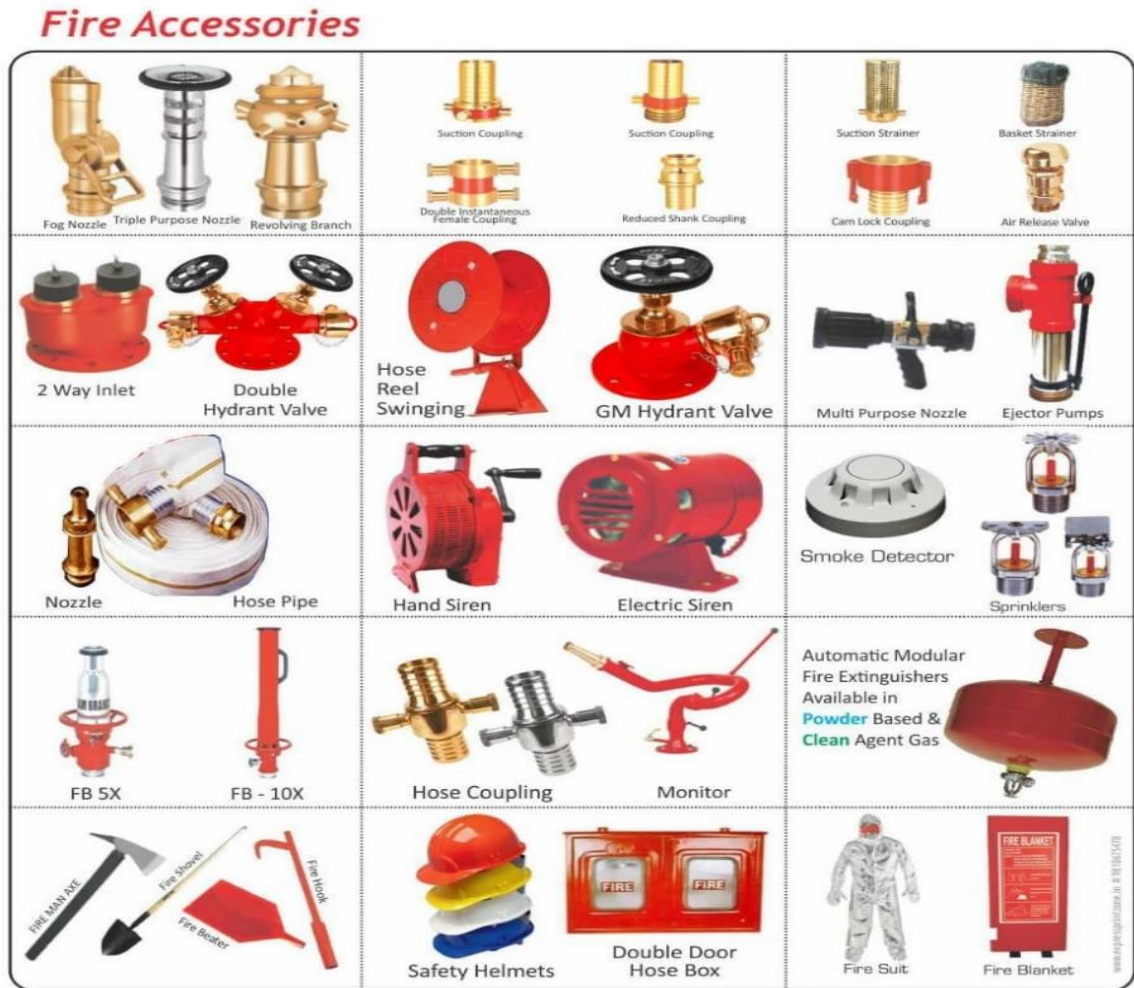

Fire safety equipment's

We deals in Safety Shoes, Safety Belt, safety cones, carbina hooks, boom barrier , Safety helmet , fire suit, Life Jacket,Dangri,Revolving Light, Emergency Light, Fire Exit, Safety helmet with torch, Eye Wash,Shawor, Gum Boots, glow sign

FIRE FIGHTING EQUIPMENTS

The Fire Fighting Equipment include Fire Hydrant System, Water Spray System, Fire Sprinkler System and others. Apart from these, we also offer other general firefighter equipment like hose reels, monitors, Water mist ,Nozals.etc

Addressable Fire alarm system

The fire alarm series Addressable control panel provides superior features with greater information capacity and convenience. The fire alarm control panels offer great functionality in receiving information from the surrounding sensors, displaying the details of detection and also communicates the status to the output devices. This panel is equipped with a colour TFT display with touch-screen interface making it more user friendly

Conventional Fire Alarm system

The conventional 2 to 32 zone fire alarm panel is designed to provide power, to receive the signal from conventional detector/MCP, and to trigger designated sounder beacons to alert/evacuate the occupants, also to trip AHU, AC supply etc. It pin-points the zone location of fire for whose indication LCD display is provided. This unit can be connected to 25 conventional devices. The panel enclosure is made of cold Rolled Sheet and it is aesthetic, sleek, compact to position as front office products
