

# Company Profile

# Who we are and what we can do for you

FT Design Agency started out as Schmuckdesign Tucek e.U., Viennese based Design Studio founded in 2007 by Jewellery Designer Fred Tucek. The company was the first to bring CAD and 3D Printing Services to the Austrian Jewellery Industry. Ever since, the company has had the pleasure to design, construct and produce High-end jewellery pieces and collections for over 300 Austrian, Swiss and German trade clients.

Since founding his company, Fred Tucek, a trained goldsmith with 30 years experience in Jewellery design and manufacture, has become highly skilled in CAD and Rapid Prototyping as well as in preparing complicated meshes for print.

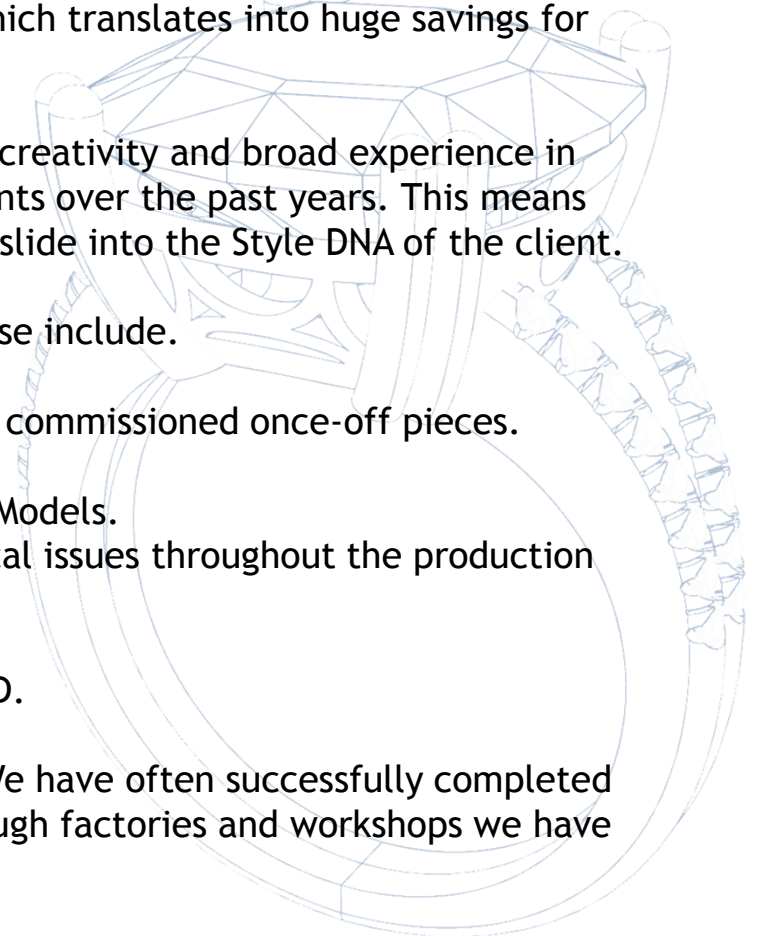

This enables Fred and his team at FT Design to offer all services needed to complete an entire collection from concept to printable, production ready 3D models in-house - significantly fast tracking the development process, which translates into huge savings for the client.

Another advantage to Jewellery Houses is FT's diverse creativity and broad experience in design as a result of working for so many different clients over the past years. This means we are able to interpret any theme or brief and easily slide into the Style DNA of the client.

We offer our services with confidence and passion, these include.

- Conceptualisation of new jewellery collections and commissioned once-off pieces.
- Design and Development.
- 3D Construction of print- and production-ready 3D Models.
- Liaising with the production department on technical issues throughout the production process.
- Design and 3D Sculpting of Object d' Art pieces.
- Visualisation for Content Creation - 2D as well as 3D.

FT Design Agency is fully geared for working remote. We have often successfully completed projects for clients we have never met in person, through factories and workshops we have never actually been to.

# Concept – Design – CAD – Production Management

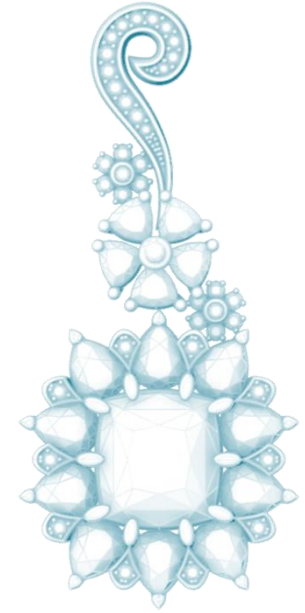

Bracelet designed and manufactured by FT for Bucherer, Vienna

# Concept & Design

At FT Design, we like to stay up-to-date with the latest trends but we also like to take a classic idea and splice it with a twist.

As a highly skilled, creative and client-focussed Fine Jewellery Designer with a strong appreciation for aesthetics, Fred has the ability to think in an unconventional way while valuing the collaborative process – making sure to apply the specifications of each Maison and their respective teams.

Fred's extensive knowledge of various 3D design software, combined with 30 years experience in jewellery manufacturing, allows him to:

- Apply a multi-faceted approach to the design process.
- Create technical drawings while at the same time building the actual model.
- Create technically sound and prototype-ready models for an entire collection.

We work in:

- Rhinoceros 3D
- ZBrush
- Sub-D
- Grasshopper Gold
- Magics
- KeyShot 11

for brooch

# Earring Concepts

# Management & Production

The production department plays a key role in the aesthetics and processes during the development phase. We always liaise with the production departments of our clients regarding technical aspects during the developmental process.

In general project management, we at FT Design Agency have all the skills required to successfully plan, design, develop and oversee the manufacturing of an entire collection or specially commissioned pieces.

# Innovation

Our research for new technology, innovative production methods and new materials never stops. If we don't have it, we source it. If we don't know it, we learn.

Design is, by definition, constantly evolving. We provide you with all our expertise and know-how gained in 30 years.

*Lotus Bracelet – Egyptian Magic*

## Technical Know-How

Fred knows all about clasps, sliders, snaps and challenging assemblies. Having worked exclusively at the bench for about 15 years, Fred applies his technical skills learned as a goldsmith while designing in CAD – ensuring that each design, however complicated, can be translated into a functional and top quality piece of Jewellery.

*Men's Bracelet - Special Commission, Client in Monaco*

From concept to a complete collection and beyond, FT Design is a reliable partner every step of the way.

The next four pages showcase a fun Series called **Rockstar** we designed and developed for *ALEXA & ARCADIA* – a new Luxury Jewellery Brand planning to launch in March 2023.

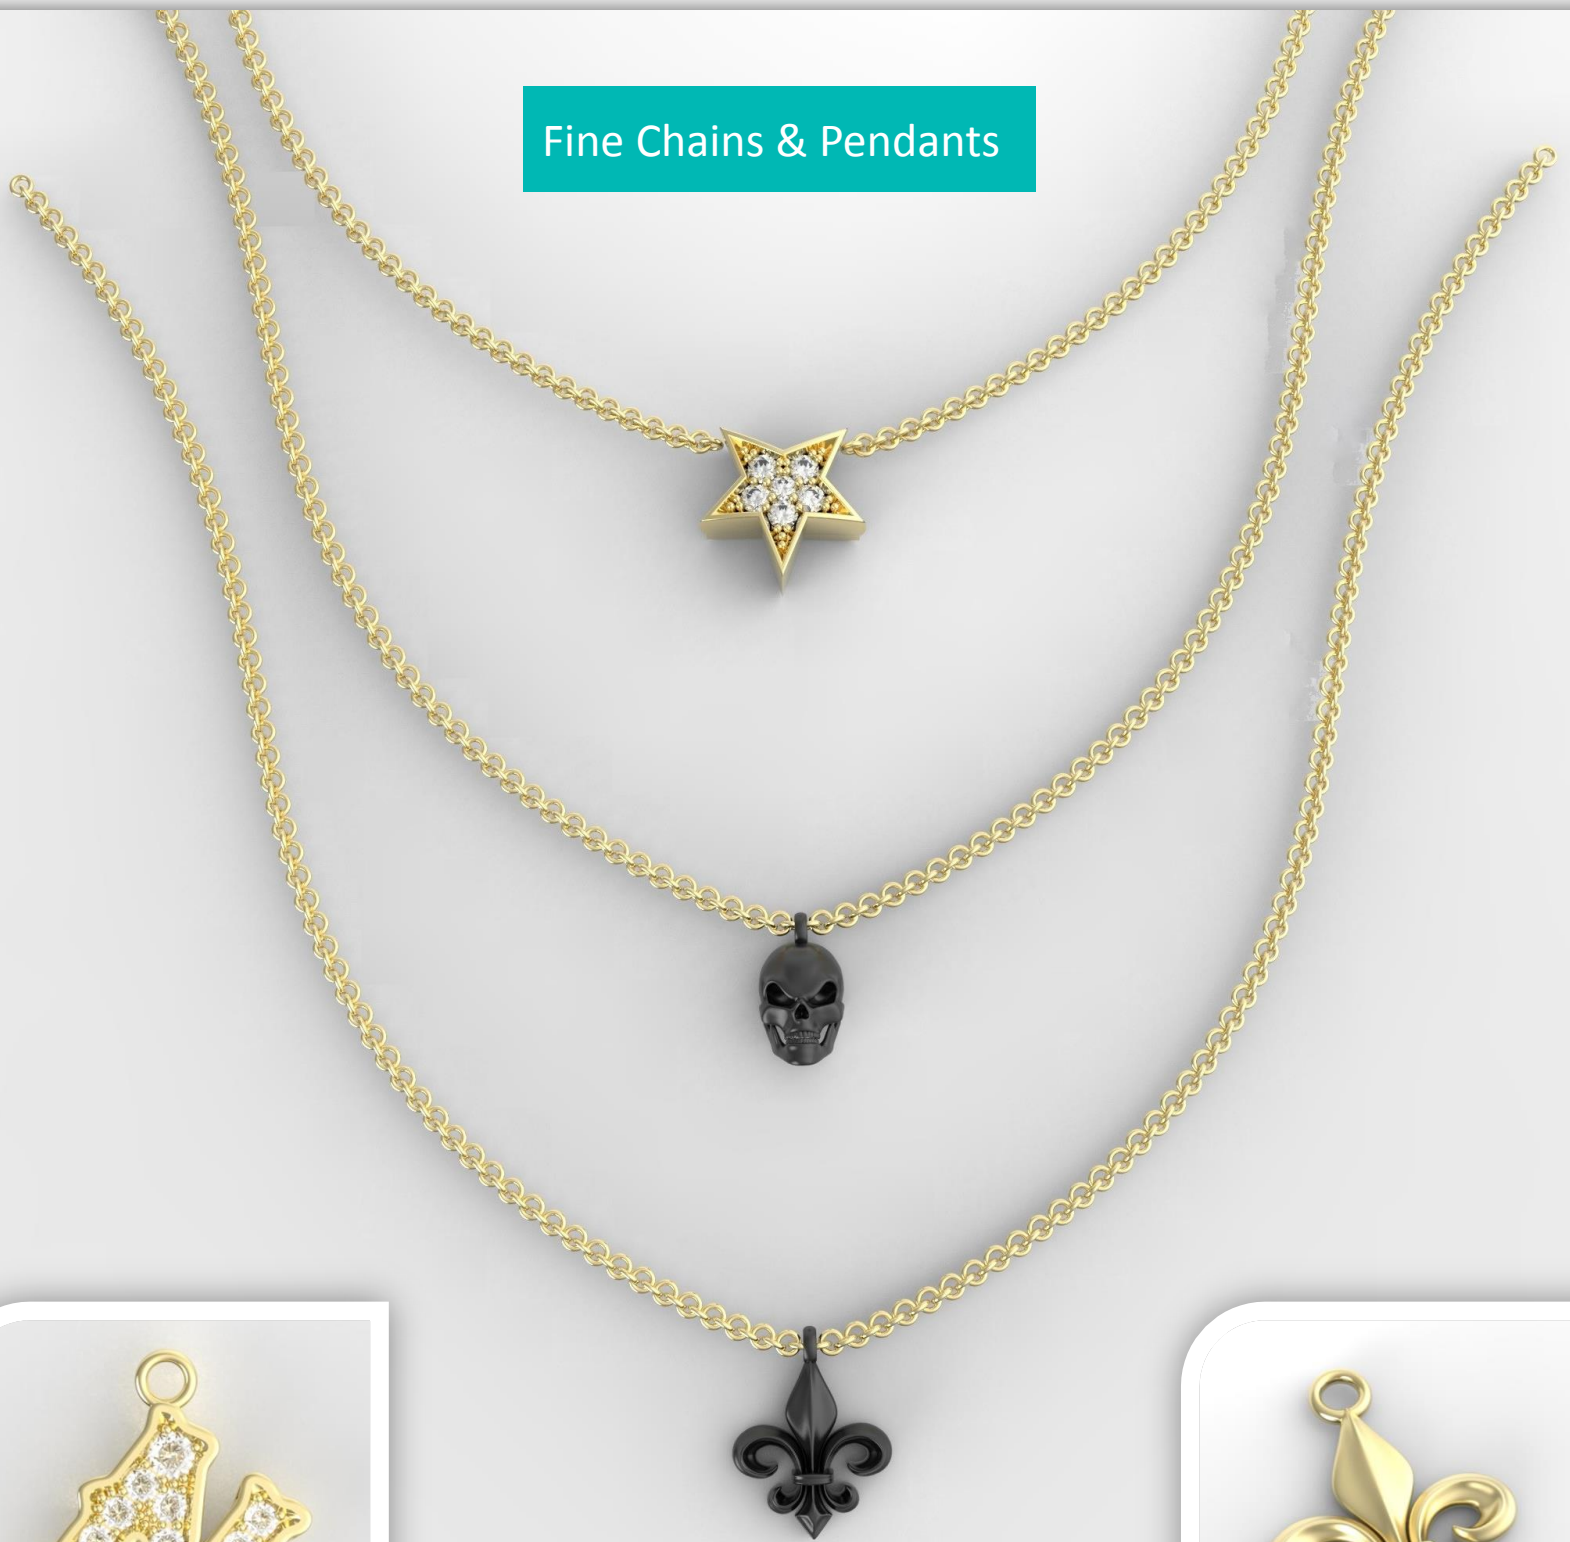

Series Design & Development

Stack Rings  
&  
Ear Studs

Fine Chains & Pendants

Rockabilly Rings

Signet Rings

The Danglies

Pendant we designed for RAF Camora, Austrian Hip-Hop musician and producer, based on an album cover of his. Sculpted in ZBrush.

Exclusive Commissions

Interchangeable Bangle and Choker we designed and manufactured for a German Princess. The diamond part clips on and off to be worn either with the bangle or as a choker with pearls.

These rings were designed and manufactured for a dear private client of ours in South Africa – she absolutely loves our fluted rings.

Pendant we designed for the German rapper Capital Bra, also called Joker Bra. The piece was commissioned to us through the Austrian Jeweller Schützlhoffer. Half Capital's Face & half The Joker, sculpted in Z-brush and Rhino.

A bit more classic
