

READING LIST

There are a lot of great books on the market relating to sports handicapping, more than you may think at first. My perspective is that it is important to cast a wide multidisciplinary net, so for me that includes offerings from handicapping, gambling, decision science, psychology, behavioral economics, forecasting, risk management, research methodology, statistics, probability theory, computer science, and computational thinking.

Here are a few authors for which I can personally vouch. They are in alphabetical order by category. I want to express my personal gratitude to each of these authors – I enjoy and benefit from your work. Keep writing!

1. Sports Betting/Handicapping Strategy

- Chris Andrews
- Josh Applebaum
- Elihu Feustel
- Pat Hagerty
- Ed Miller (with Matthew Davidow)
- Ben Orlin
- David Spiegelhalter
- Stanford Wong
- King Yao

2. Behavioral Economics/Decision Science/Psychology

- Annie Duke
- Daniel Kahneman (with Amos Tversky)
- Tobias Moskowitz (with L. Jon Wertheim)
- Steven Pinker
- Nate Silver
- James Surowiecki
- Phil Tetlock (with Dan Gardner)
- Richard Thaler (with Cass Sunstein)

3. Research Methods/Statistics/Algorithms/Probability Theory

- Brian Christian (with Tom Griffiths)
- Jim Frost
- Masaru Kanemoto
- Michael Lewis
- Andrew Mack
- John Allen Paulos

If you have a favorite author to share, please let me know at doc@profootballinsights.com. I spend a lot of time in the off-season sharpening the saw and would be happy to increase the height of my nightstand stack.
