

Just after midnight on 6-26-10 I was going west on hwy 150, entering the valley just before Greenville, Ar. The hwy. is a straight stretch across to the other side

As I entered the valley I spotted a brilliant blue three spoke object that had a white light in middle and a white light on the end of each spoke. While I was not looking the bright blue spokes went out, but the white lights did not. Now I turned off my radio and put my car in neutral to coast so I could concentrate on what I was

looking at. There was a small blue light still on just before the white light on each spoke end. I came to a complete stop in the hury and was looking up. ~~Top was down on my car~~ at the UFO just off to the right side of the road. (The top of my car was down, full moon, no clouds at all.) The UFO had decended from my original sighting position. As I sat ~~staring~~ closely observing the silent craft, the white spoke end lights started pulsating in different sequences, then the ^{upper} center light

pulsed last and brighter than the spoke lights
round and took up most of the center of
the craft. The spoke lights appeared
barrel or lantern globe shaped, rounded
on sides

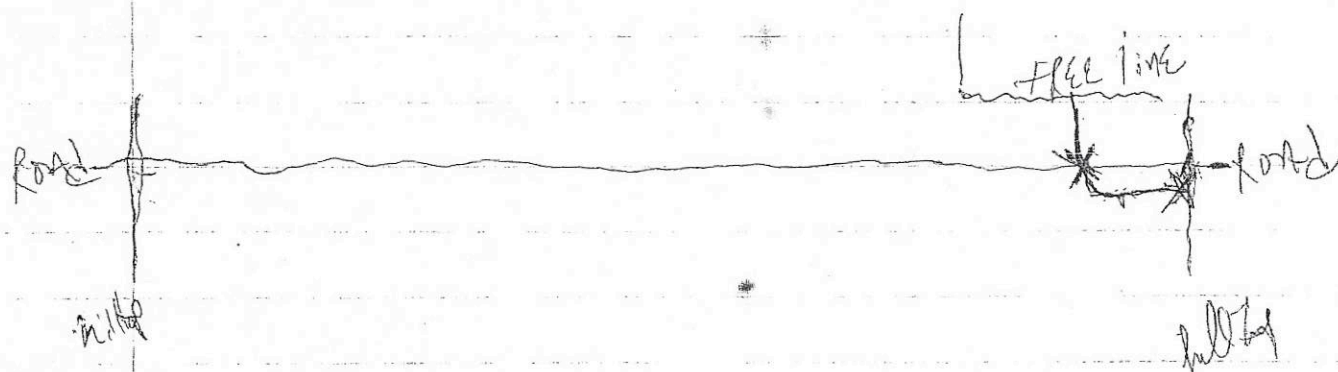

than the spoke itself, but the light could
have made it appear wider. The craft was
a black/graphite color and difficult to find
an edge on it. The spokes were about

~~approx 5 1/2 ft.~~
about 5 or 6 ft. wide.

25-30 ft. long each, and the center was

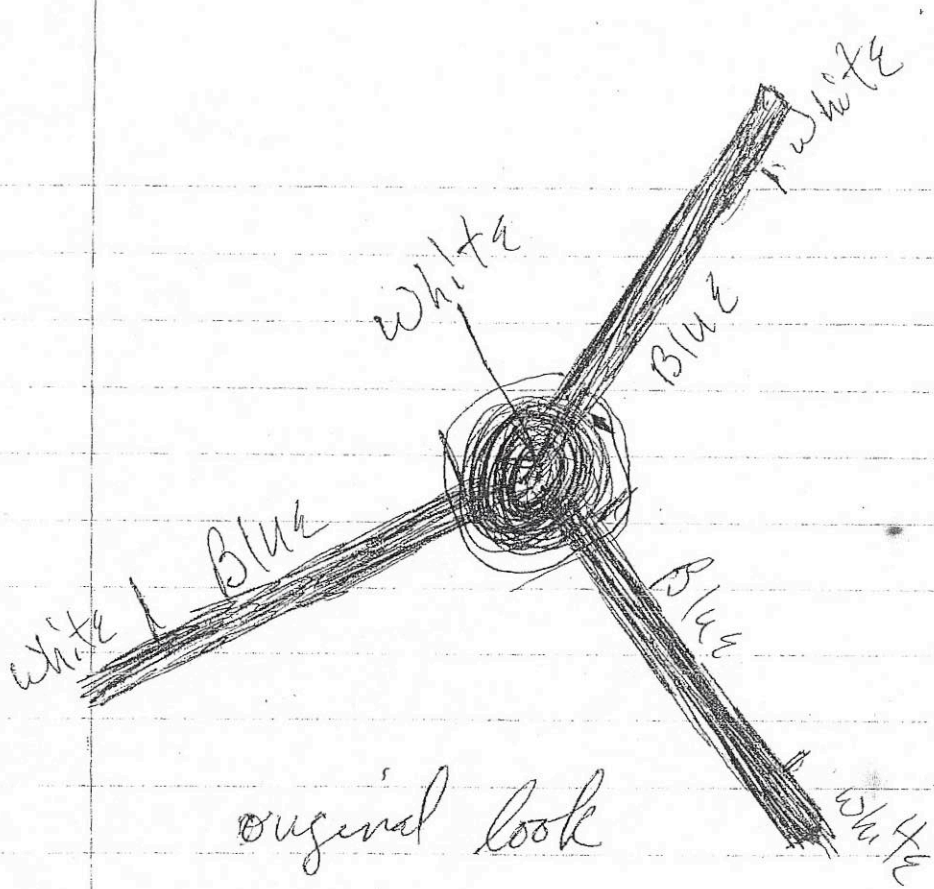

10-12 ft. across. The white center light was too bright for me to see the edge of the center of the craft between the spokes. As I sat in the hwy staring up at it, the ^{spoke} end white lights began pulsating in different sequences. 2-1, 2-1, changing combinations, three or four times, then the round center light pulsed very bright and back to normal as before. The craft then slowly drifted toward and over me. When the silent craft was directly over me I heard a quiet

jet engine sound, ~~with~~ and then a loud crackle pop overpowering the hushed jet engine sound. As soon as the craft cleared my car, the sound also left. The crackle pop was like static electricity, only very loud and constant. The sound was very directional, ~~as~~ like a light beam would be.

The craft was not  but slightly tilted

like this \Rightarrow
