

SAT Test Prep Classes 9-11th Grade

After conducting a comprehensive needs assessment, our team develops an individualized learning plan for each of our students. Then our teachers merge the data analysis with the core concepts in critical reading, writing, grammar, and math required for solving the types of problems that recur on the specific standardized test that a student is taking. We believe that preparing for standardized tests should not only improve scores but also equip students with the tools for enhanced performance across all their academic work. Over the course of the class, our program will equip you with the skills and knowledge to perform well on test day. Our instructor will spend time on test mechanics & test-taking strategies including time-saving techniques, how to read a passage efficiently, and multi-choice elimination strategies.
