Pneumococcal vaccine timing for adults with certain medical conditions

Indicated to receive 1 dose of PPSV23 at 19 through 64 years with no history of pneumococcal vaccination or unknown history

If the patient and provider decide (through shared clinical decision-making) PCV13 is **not** to be given at age 65 years or older:

- Administer 1 dose of PPSV23 at 19 through 64 years.
- Administer 1 final dose of PPSV23 at 65 years or older. This dose should be given at least 5 years after the most recent dose of PPSV23.

If the patient and provider decide (through shared clinical decision-making) PCV13 is to be given at age 65 years or older:

- Administer 1 dose of PPSV23 at 19 through 64 years.
- Administer 1 dose of PCV13 at 65 years or older. This dose should be given at least 1 year after PPSV23.
- Administer 1 final dose of PPSV23 at 65 years or older. This dose should be given **at least 1 year** after PCV13 and at least 5 years after the most recent dose of PPSV23.

Includes adults with: • chronic heart, lung, or liver disease • diabetes mellitus • alcoholism • Also includes adults who smoke cigarettes

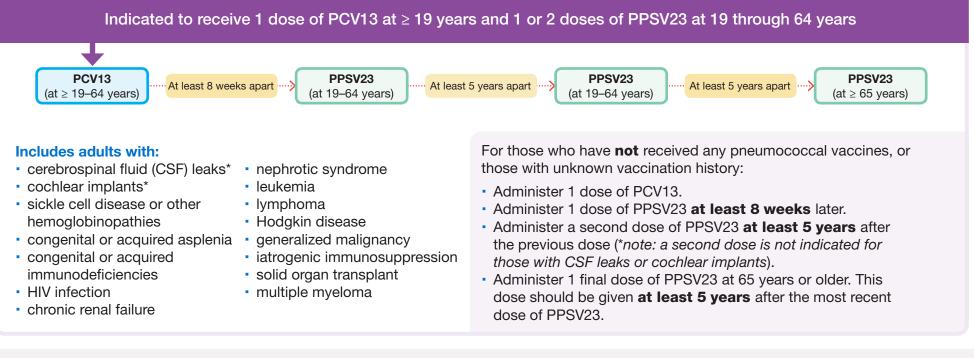

Table 1. Medical conditions or other indications for administration of PCV13 and PPSV23 for adults

Medical indication	Underlying medical	PCV13 for \geq 19 years	PPSV23* for 19 through 64 years		PCV13 at \geq 65 years	PPSV23 at ≥ 65 years
	condition	Recommended	Recommended	Revaccination	Recommended	Recommended
None	None of the below				Based on shared clinical decision-making	√ If PCV13 has been given, then give PPSV23 ≥1 year after PCV13
Immunocompetent persons	Alcoholism Chronic heart disease [†] Chronic liver disease Chronic lung disease [§] Cigarette smoking Diabetes mellitus		\checkmark		Based on shared clinical decision-making	✓ If PCV13 has been given, then give PPSV23 ≥1 year after PCV13 ≥ 5 years after any PPSV23 at < 65 years
	Cochlear implants CSF leaks	\checkmark	✓ ≥ 8 weeks after PCV13		✓ If no previous PCV13 vaccination	✓ ≥ 8 weeks after PCV13 ≥ 5 years after any PPSV23 at < 65 years
Persons with functional or anatomic asplenia	Congenital or acquired asplenia Sickle cell disease/other hemoglobinopathies	\checkmark	✓ ≥ 8 weeks after PCV13	✓ ≥ 5 years after first dose PPSV23	✓ If no previous PCV13 vaccination	✓ ≥ 8 weeks after PCV13 ≥ 5 years after any PPSV23 at < 65 years
Immunocompromised persons	Chronic renal failure Congenital or acquired immunodeficiencies [¶] Generalized malignancy HIV infection Hodgkin disease latrogenic immunosuppression [‡] Leukemia Lymphoma Multiple myeloma Nephrotic syndrome Solid organ transplant	\checkmark	✓ ≥ 8 weeks after PCV13	✓ ≥ 5 years after first dose PPSV23	✓ If no previous PCV13 vaccination	✓ ≥ 8 weeks after PCV13 ≥ 5 years after any PPSV23 at < 65 years

*This PPSV23 column only refers to adults 19 through 64 years of age. All adults 65 years of age or older should receive one dose of PPSV23 5 or more years after any prior dose of PPSV23, regardless of previous history of vaccination with pneumococcal vaccine. No additional doses of PPSV23 should be administered following the dose administered at 65 years of age or older. *Including congestive heart failure and cardiomyopathies [§]Including chronic obstructive pulmonary disease, emphysema, and asthma

¹Includes B- (humoral) or T-lymphocyte deficiency, complement deficiencies (particularly C1, C2, C3, and C4 deficiencies), and phagocytic disorders (excluding chronic granulomatous disease) [‡]Diseases requiring treatment with immunosuppressive drugs, including long-term systemic corticosteroids and radiation therapy

Additional scenarios: completing the pneumococcal vaccination series for adults recommended to receive PCV13 \geq 19 years
