

RENEW DERMAL SOLUTION FAQ

CLIENT FAQ

What is Renew Dermal Solution (RDS)?

Renew Dermal Solution (RDS) is a revolutionary patent-pending two-step skin treatment that yields excellent skin rejuvenation results with less downtime, no skin peeling or pain. The secret is the two-step process. Step one uses RDS1 Penetrating Solution, which is a trichloroacetic acid (TCA) mixture that penetrates the dermis and rearranges underlying extracellular matrix proteins. Step two introduces RDS2 Calming Solution to the skin to penetrate deep, soothing the skin with human stem cell proteins such as extracellular matrix proteins, growth factors, antioxidants, and signaling molecules that instruct your body to repair skin damage. This support of cellular turnover results in rejuvenated, healthier looking skin.

Is RDS different from a chemical peel?

Traditional chemical peels actually cause peeling of the epidermis to rejuvenate the skin. RDS does not—it penetrates deep into the dermis and stimulates collagen production while rearranging preexisting extracellular matrix proteins. Then, it adds back extra human stem cell proteins derived from ethically sourced adipose-derived mesenchymal stem cells (ADMSCs). This extra amount of stem cell factors is critical— as you age, your skin is less capable of renewing itself, largely due to the fact that you lose stem cell activity in your skin as you age. RDS supplants those factors, allowing the skin to look healthier. In essence, RDS is a dermal rejuvenation solution that uses time-tested biology to improve your appearance.

What are the benefits of the treatment?

Immediately after one treatment you will experience a “glow” and tighter, firmer skin. Over the next week-month, your skin will continue to improve in texture, tone, elasticity, and coloration. Expect to reduce brown spots, see fewer wrinkles and fine lines, and thicken your skin after treatment. It can also be used to reduce scarring and stretch marks all over the body. Importantly, RDS can be combined with other treatments to enhance their efficacy and long-term results.

Can I get a treatment of RDS if I have active acne?

Consult with a medical professional before using RDS if you have active acne. We don’t recommend RDS application if you have used isotretinoin within the past six months, tretinoin within the past 30 days, or retinoic acid within the past 15 days.

What is the treatment application process like?

First, the skin will be cleaned thoroughly. Afterwards, RDS1 Penetrating Solution will be applied and massaged into the skin. Depending on the thickness of your skin and the desired results, multiple layers of product will be applied. RDS1 will then be removed with water-soaked gauze. Then, RDS2 Calming Solution is applied to the skin and allowed to absorb before you leave the office. The entire treatment takes around 30 minutes to perform, and gives immediate visible results that will continue to get better over time.

Is there discomfort during the application?

The procedure is painless, but clients may experience a mild tingling or warm sensation during the RDS1 application process. This is normal and indicates that RDS1 is hard at work revitalizing your skin! Immediately after RDS2 Calming Solution is applied, the skin may be slightly red, but this will dissipate as the skin is moisturized.

How many treatments do I need to see results?

One! You will see instant, visible results in the brightness, tightness, and texture of your skin after just one treatment. However, you should discuss with a medical professional your goals so you can both create a personalized plan for multiple treatments to address specific concerns, such as brown spots, saggy skin, or wrinkles in certain locations.

CLIENT FAQ

If I want more treatments, how long do I have to wait in between?

If you are receiving multiple treatments, we recommend a minimum of 7 days in between RDS treatments.

Can I combine RDS with other treatments or procedures?

Yes! Consult with your medical professional when you design a plan for beautification; many procedures can be combined with RDS application.

What should I expect immediately after my treatment?

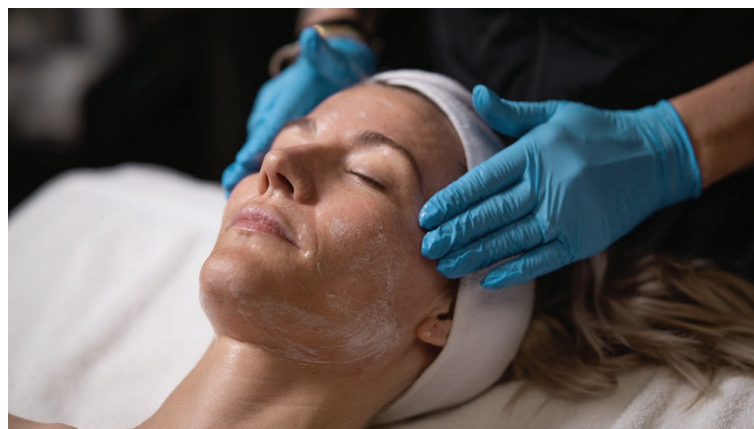

When you leave the procedure room, you should be able to see your skin is glowing and will feel tighter, with a smoother texture. Over the next few days you may experience slight flaking, but this can be dealt with by moisturizing with FACTORFIVE Nourishing Silk and Anti-Aging Cream found in our 7 Day Post Treatment Kit.

What after care regimen is recommended after an RDS treatment?

We recommend the FACTORFIVE 7 Day Post Treatment Kit for an all-inclusive after care experience, paired with an appropriate SPF for UV protection. Applying these products in the morning and before bed will provide your skin with all the hydration needed to keep flaking and redness at bay, while also providing human growth factors and key ingredients to boost healing and cell regeneration. If these options are not made available to you, apply a light moisturizer morning and night, coupled with SPF during the day.

Are there limitations to what I can do after the RDS application?

You should experience very little downtime after the treatment. You can resume your normal face care regime, but take care to keep your face well-moisturized. An SPF is recommended if you are going in the sun.
