

ASPW - 3

Language of Light

Language is encoded into the DNA and then the molecules, etheric cellular structure, grid work, chakra system, subtle bodies, light body, and greater auric field woven with the associated language. As the molecules and chakras, along with subtle bodies and light body spin, the language emanates sound in a chorus of music. The chorus of music is known as one's *vibration*.

The Language of Light has no destructive or judgmental concepts, nor does it hold extremes of thoughtform. The Language of Light is a balanced thoughtform that creates a unity-based experience and dream.

There are many languages upon Earth due to the diverse planets, stars, and universes that life forms originated. In addition, humans have added 18 languages from many diverse creations that they originated. The diversity is because the humans that were seeded from Sirius held DNA from 18 other creations that this is so. Furthermore, the Pleiades, Andromeda, Jyreion, and Alpha Centauri (Reptilians) added their languages in the blending of DNA with the human form.

DNA, Ascension, and Language. For any human to ascend to 1,024-1,800 segments of DNA, any one of twelve different languages have proved to be helpful for this purpose. The languages are embedded in one's root-race or Anu ancestry. As one embraces the sound, tone, movement, and symbols of one's ancestries language, that was held at a previous time when one's ancestry was higher vibration in the physical form, one ascends. As one ascends the etheric, the biology begins to transmute itself gradually over time to a new cellular structure known as "crystalline", which is also a cellular structure that one's ancestry knew at an earlier time in human history upon Earth.

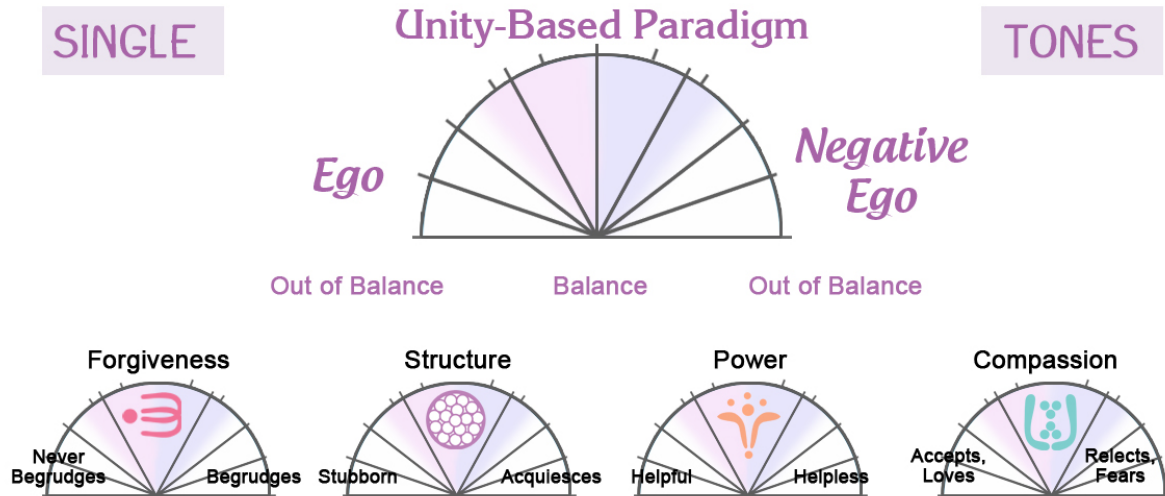

Transmuting Personal Karma

To transmute our personal karma, we must apply the Language of Light tones of creation that one has mastered in one's field in the form of the elements of fire, water, air, and Gaia/Earth. As one moves the kundalini, one calls the element of fire that one generates in one's own larger

chakras spinning around the Aurora up through the etheric body; the fire then acts as a transducer to transform density, dissipating it into non-existence.

Therefore, recognize that one must build a strong kundalini, and to the degree that one can push the sexual energy through the etheric body, one will not only ascend, but clear their ancestral karma potentially working one's way off the karmic birth, death, and rebirth cycles in this lifetime. In so doing, one will also learn the spiritual lessons of one's birth ancestry, leading to another day for your future ancestors ahead. The image below is a partial list of the language of light polarity checker. The second image is Transcending Kumara Planes & Embracing Triple Lotus Flow.

Transcending Kumara Based Planes

Embracing Triple Lotus Flow

The Language of ONE is a holographic language that is emerging upon Earth in her continued ascension. The Language of ONE defines oneness concepts. Oneness is a state of self-sustenance in which all is provided from within. Earth is traversing through a diverse region of domain in the choice to re-enter the dream of the Great Central Sun. Within the “Star Gates” leading into entry are many languages of light.

As Earth ascends tones and symbols are provided by the Great Central Sun(s) and through each Star Gate entered, captured within the Aurora. The symbols rotate. Gaia/Earth then assesses each symbol to see if the rotation fosters ascension of her field or portions of her field or not. Those symbols that fail to foster ascension are discarded and erased. Those that foster ascension are embraced as a part of Earth’s new *operating system* or language.
