CMW ASIA Scaffolding manpower are highly experienced and fully trained in accordance with **BE EN 12811-1:2003**.

QUALITY AND SAFETY

ASIA

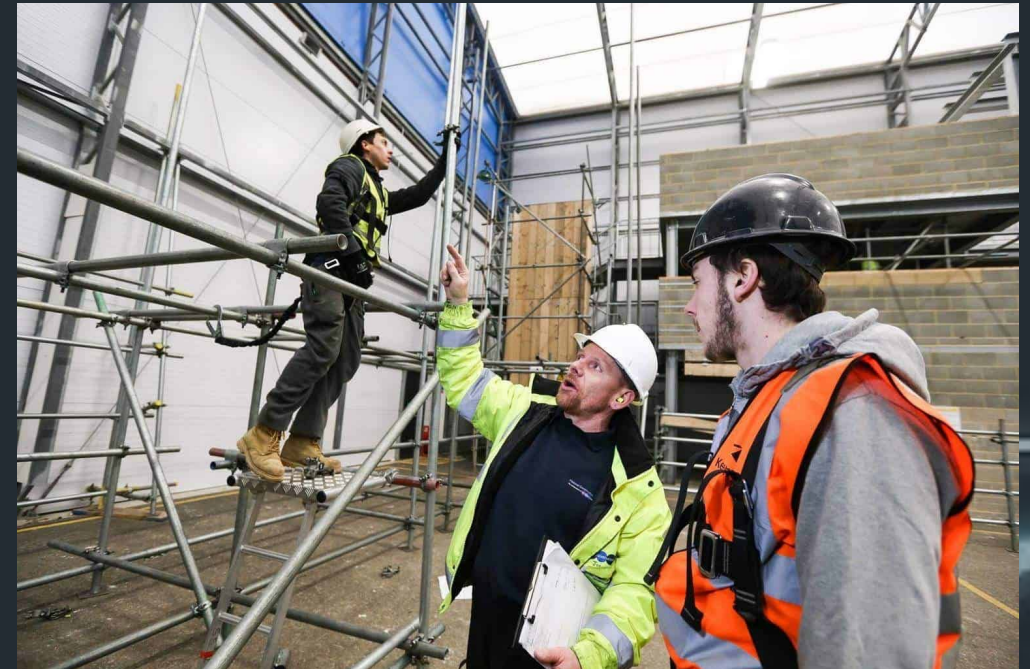

SCAFFOLDING | CONSTRUCTION

Quality

To ensure the quality of scaffolding, we ensure that inspections are conducted every start of the shift and after conducting work to check the structural integrity of the scaffolding.

Safety

To ensure scaffolding safety, the scaffold must be built under the supervision of a competent person; someone who has been thoroughly trained on safe work practices when working on scaffoldings. And workers must be trained by a qualified person before they use the scaffold.
