

APS

Smart Tracking for Mines and Tunnels

APS a manufacturer leader for
Smart Tracking solutions

Tracking workers and assets in Mines

Tracking employees' location in mines and tunnels improves safety and helps to prevent accidents. APS is providing a unique system to address the challenges in mining.

The APS BLE5 long range system enables tracking and tracing BLE tags carried by mining employees from long distance even in harsh conditions underground without wifi or Ethernet cables.

This robust system is working for several years with almost no maintenance required, providing location based alerts and safety supervision.

No need for Wifi, Ethernet or cellular network inside the mine
Robust system, proven for continuous operation over several years

Low power locators can work with rechargeable battery and its position can be changed dynamically during work in the mining. In open places, a solar panel can charge the battery.

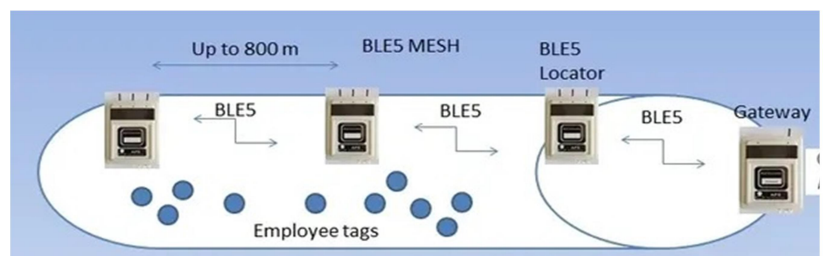

Water proof BLE tags carried by employees detected from long ranges around each Locator. Exact location is calculated with various algorithms
