

# 3-Stage Sequencing Halo LED Tail lights for C5

# IMPORTANT!!!

- One light on each side is designated the “Master”. The connector on the master light has a silver stripe on it. when connecting to the factory socket the stripe should be oriented so that it is on the wire side of the socket (see picture)
- Turn on the parking lights to verify you have the master light plugged in correctly. The Halo should illuminate.
- Locate the light labeled “Control”. It must be plugged into the master for it to function. There is a four-pin connector that links the master and control lights. Connect these connectors and the factory connector and verify function using both the hazard switch to test the sequencing function and parking lights to check the Halo function.

Note “Silver Stripe”
