### Huawei Mobile Broadband Devices Privacy Notice

To improve our services, this device will obtain your software update information from Huawei or your carrier when connected to the Internet. During this process, mobile data usage may occur, and we need to collect your following information to check whether your device needs to be updated:

- Device information  
Including device identifier (IMEI) or serial number (SN)
- Network information  
Including service provider network ID (PLMN)

The data controller is Huawei Device Co., Ltd. The above information will be used to check for updates.

This device has an automatic update feature, which allows the device to automatically download and install critical updates from Huawei or your carrier. This feature is enabled by default. To disable this feature, go to Advanced > System > System Settings > Auto-update on our web-based management page.

To learn more about privacy and your rights, please click [here](#).

### Overnight updates

When Overnight updates is enabled, the device will automatically update to the latest version between 3:00-5:00 AM when the device is idle. Updating will use some data. Enable?

Choosing to disable this feature may result in the following:

1. Missing the newly added features.
2. Less optimal user experience due to data not being updated properly.

You can access the Overnight updates setting again in Advanced > Updates.

Enable And Continue

## SMS Conversation (1)

You can create, forward, and delete SMS messages, delete contacts, and send group SMS messages here. These messages are stored on your device. When you reach the limit for locally stored SMS messages, the message icon will flash. You will then need to delete some messages, otherwise you will be unable to receive new ones.
