

AMEC LIGHTNING METAL™ EQUIPMENT:

Want to Use AMEC at Your Site?

Skuld is introducing the LM16, a revolutionary new system designed to bring AMEC to sites without their own casting facilities.

The system is designed to produce up to 10 pound aluminum parts in a 7x7x7 inch envelope.

The system can also be used to produce brass, bronze, and copper components.

NOTE: If you have larger or other metal needs, please reach out to us as we also can create custom systems

Additive manufacturing evaporative casting has the following benefits:

- Make net shape metal parts in less than a day.
- No tooling.
- Minimal if any machining.
- No HIP-ing required.
- Easier qualification by producing known metal microstructure and properties.
- Material costs as little as \$2/lb.
