

Got SOPs?

Standard operating procedures (SOP), procedural manuals, work plans, compliance plans...these go by many names, they are critically important.

- If your company ever faces regulatory enforcement or a civil suit your SOPs will always be scrutinized as part of those difficult circumstances.
- Informed clients will often ask for SOPs to know how you will perform your work and how it will comply with existing regulations.
- Air sampling...asbestos and LBP inspections/surveys...LBP compliance documents (OSHA, HUD), AHERA documents...contractor work plans...light microscopy laboratory procedures and more.

In my experience with clients, many of these documents were written years ago and may not really reflect HOW you perform your work...that's the problem. Do they meet OSHA, EPA, HUD or other regulation requirements

**So...do you or your staff have the expertise or TIME to develop, review and update your documents?
*Often not.***

I can help! I have worked for major corporations and industry firms to develop, review and update SOPs.

Drop me a line at tglconsulting@att.net and let's talk about what we can do to develop or update your documents to meet current regulations and general industry practices.

Providing high quality expert asbestos and LBP training and consulting services for over 35 years
