

Asbestos Program Audits

- Many institutional asbestos programs have existed for years but are now faced with retirements and staff turnover.
- Far too often, EH&S/IH managers do not have the necessary training or experience to know if their asbestos programs can meet regulatory management and communication requirements...or not.
- From asbestos surveys to the management of maintenance staff and removal contractors...there are still many that rely on paper files and outdated information that can lead to non-compliant work and possible risk to your building occupants and maintenance staff.
- I have worked performing many varieties of system audits from the largest of federal facilities down to local firms.
- These can be regulation-specific (OSHA, EPA etc.) or a system-wide review of compliance with recommendations that are project specific...not generic language used in boilerplate reporting.

So, do you or your staff have the expertise or TIME to know what is really being managed for your firm, university, hospital, or federal/state institution?

Often not.

I can help! We can plan and execute a program to help you know where you stand with compliance, management, and risk goals.

Drop me a line at tglconsulting@att.net and let's talk about what we can do to better train your staff on current regulations and general industry practices.

Providing high quality expert asbestos and LBP training and consulting services for over 38 years
