

The labels(in red) at the top of this page identify 4 important parts of the browser. This is a Chrome browser page but the rest of the browsers; Firefox, Edge, and Safari all have a similar layout. Tabs allow you to go to a different website on each tab. Clicking the right mouse button while your pointer is on a tab gives you a menu that allows full control over tabs. Open any browser and you can experiment with this menu to learn how it works. When you close the browser with the X in the upper right corner you will be asked if you want to close all tabs or only the currently highlighted one. “Close all” then start the browser again and practice using tabs. Don’t worry you won’t hurt anything. There are 3 tabs open on this page. The + sign to the right of the last tab on the tab bar creates another new tab.

The address bar will take you directly to any valid address you type there. If the address is not valid it will search instead. Once a page is open you can bookmark a page by clicking the star on the right side of the address bar. The favorites bar shows anything you bookmarked, On this page you will see that facebook is on the bar. I will provide a separate document dealing more fully with favorites.

Practice with the tabs practice link under Video List on this page. Completely safe it will not hurt anything to practice.
