

HUB System – Canbus System Install Diagram

Notes:

If your bike/snowmobile has a Canbus System, you may need a 12v 20a relay (not provided). This diagram shows how to install the relay with the HUB System. Please check with your dealer if you're unsure. We used a relay from Digi-key part #Z2051-ND or 255-2725-ND with no issues.

Brake light wire on F800GS and F700 voltage is around 2 volts for tail light. When the brake is applied, this wire gets 12 volts.
