

Collabaro

Keeping your service
team on track

ROLLING STOCK INSPECTION SOFTWARE

Smarter asset management

Look to Collabaro, a unique enabling software that delivers enhanced service provision and profitability.

Whether you own or operate rolling stock you have a financial interest in maintaining vehicles in good condition.

Combining the flexibility of mobile and cloud-based technologies, Collabaro is a software solution for managing service jobs & capturing structured data from the field, including images.

- Create detailed inspection & repair reports to share with stakeholders
- Maintain productivity as your field team grows
- Ensure HSE checks are done
- Automate time-sheet production
- Manage high volumes of image data, efficiently
- Rapidly adapt to the reporting demands of new projects & asset classes

Using Collabaro you will have tighter control over the work of multiple service engineers and preparing detailed service reports will no longer be an administrative burden.

Easy to use tools allow you to deliver data capture forms onto engineers' iPads and prepare report templates that will use the collected data to produce professional quality work reports for your clients.

Collabaro can manage repeat inspection processes, building the history of defects that you need for condition monitoring. By providing the data required to move from a planned to a predictive maintenance strategy, Collabaro can drive O&M costs down.

Innovative technology enables multiple mobile engineers to collaborate on tasks, sharing data (such as readings & images) in real-time with both each other and with remote project managers. This ability allows you to more effectively share expertise across multiple jobs.

Flexible data capture

CREATE

Design templates for mobile devices, for engineers to capture readings and images

COLLECT

Gather field data via iPads and upload to a secure cloud server

DELIVER

Collate and merge data and images to produce reports formatted to client templates.

Get ahead in the field

Collabaro's unique software framework fulfils the requirements of asset owners, operators & contractors who need to collate and communicate large quantities of inspection or repair data, including multiple high-resolution images.

Intuitive tools gather field data via an iPad and merge it with user designed report templates, creating perfectly formatted reports ready to be sent to stakeholders.

Efficient data analysis aids decision making, project pricing and engineer deployment.

The ability to free up field engineers from time-consuming report administration offers significant productivity gains.

Alongside data capture and progress tracking, versatile functionality allows for the design of PPE checklists, risk assessments and other compliance certification requiring a pre-work digital signature. These records are securely stored in the cloud alongside the other job data, ready to be instantly included in reports as required.

Enhance productivity. Enhance profits. And enhance your company's reputation in the eyes of potential clients.

Powering productivity

Collabaro is just one of the transformational digital innovations pioneered by Railston's.

Our strategic technology consultancy services enable companies to harness the benefits of artificial intelligence to enhance their business processes.

AI driven image analysis has the potential to classify data and identify defects and deterioration that might be missed by the eye.

Smart service companies embrace the Collabaro benefits:

- Intuitive software supports creating digital documents in line with client templates
- Cloud based technology allows easy transfer of data and images to mobile devices
- Enables contractors to deliver professional looking reports based on the clients requested template
- Facilitates real time collaboration between the field and the back-office
- Regular job updates and time recording helps keep projects on schedule and within budget.
