

FLASH POWDER 7-3 (MOST COMMON)

Potassium Perchlorate

70% AMT:

Aluminum, flake, dark, German
Blackhead. 3 micron

30% AMT:

Total:

SUMMARY

Do not mix through screens, mortar and pedestal, ball mill or any other method involving friction. Preferable method is the diaper method, whereby ingredients are placed on a sheet of paper and mixed by pulling up opposite corners of the paper so that the composition slides over itself. Flash will detonate unconfined if ignited, so use great caution.
