Introduction

COVID-19 has impacted the health, physical, mental, social, and economic aspects of the world. School re-openings will present challenges that pediatricians can help manage in their community. It will take the entire community, working alongside school systems, to provide guidance and resources to keep students, teachers, school administrators, staff, and families healthy, safe and secure. The pediatrician’s role is critical in providing knowledge about the spread and symptomology of this virus, especially as it pertains to children, and in developing strategies to reduce transmission, monitor outbreaks, and minimize anxiety within the school setting.

Refer to:
Redbook 2019 Novel Coronavirus (SARS-CoV-2 that causes COVID-19) Pandemic

The Arizona Chapter of the American Academy of Pediatrics (AzAAP) has developed this toolkit that can serve as a template for how the pediatrician can become involved in school re-openings. It includes:

- Sample introductory letter to send to your local school’s leadership expressing an interest in participating in the planning and implementation of school re-openings.
- Sample handout for patients emphasizing the importance of reconnecting with pediatricians during this crisis.
- Frequently Asked Questions (FAQ)
- Resources for the pediatrician

We hope you find this toolkit helpful. Please contact us with suggestions or comments for future updates at leadership@azaap.org.

Please note that we have endeavored to provide the most up-to-date information regarding the topics included in this handbook. Many, but not all, of the resources listed in this toolkit are regularly updated.

For the most recent updates you may also wish to check the American Academy of Pediatrics (AAP) website: www.aap.org.

Refer to:
Critical Updates on COVID-19
Sample Introduction Letter

The letter below can be sent or emailed to the superintendent of schools in your practice’s community. For further information on public and charter schools in your community go to:

Public Schools
https://www.azed.gov/districtwebsites/

Charter Schools
http://www.ade.az.gov/charterschools/search/

Date: _________

Dear Superintendent ________,

My name is Dr. ________ and I am a practicing pediatrician in _________.

The challenge of reopening schools during COVID-19 is a daunting task and requires the support of the entire community.

I am offering my support and would like to assist in the planning and implementation of school re-entry in your district. In addition to the many challenges you face in resuming educational instruction for your students, I know that your district will need to address many COVID-19 issues. You also will be tasked with addressing the physical, emotional and social needs of everyone in the schools, especially the students. I am offering my help in developing policies and procedures and providing resources for you, your staff and the families you serve.

In these difficult times, It is my intent to help lighten the load. Please let me know how I might be of assistance.

Sincerely,
_____________________________

Why your child needs a visit to the doctor this summer!

Connecting with your pediatrician for a well check or sick visit may seem scary in a time when we are all trying to minimize risk of infection. But there are some very important reasons why it is vital to stay connected with us:

1. **The better your child’s baseline health, the better they will be able to fight any infection or stressor during the COVID-19 pandemic.**

Well child checks allow you to go over all aspects of your child’s physical and emotional wellbeing. We have been working tirelessly to create ways to safely communicate with your family and minimize in-person time in the office. We have changed the office environment to comply with social distancing rules and are deep cleaning multiple times a day to keep you safe. Call us to find out your options.

2. **It is vital that your child’s vaccines are up to date.**

Vaccine-preventable illnesses like flu and measles not only harm your child’s health but also harm the health of everyone in your community who may come into contact with your child. These diseases can be deadly, may require hospitalizations which would increase your child’s exposure to COVID-19. These infections which could be prevented by vaccination also rob your immune system of the ability to fight other infections, including COVID-19.

3. **Chronic medical conditions like asthma, allergies or diabetes must be optimally managed so that your child’s baseline health is the best that it can be.**

If your child has a chronic illness, it is important to discuss with your pediatrician a management plan for them during this pandemic. This may include an adequate supply of medications and equipment that you should have at home, how and when to contact your pediatrician if your child becomes ill and what to do if your child is exposed to COVID-19.
4. If your child has had difficulty learning while schools have been closed, your pediatrician can help you develop an action plan for your child and address these issues.

Children with learning differences, focus-related issues or other disabilities miss services that help learning. Touching base with your pediatrician over the summer will allow you to create a plan with your child’s school to best help them succeed.

5. Physical distancing, social isolation, and other stressors during this crisis are greatly affecting the mental health of children and their caretakers.

Loss of caretaker jobs and income, lack of food, unstable housing and other stressors have impacted the social and emotional health of children. Many families are on edge. Children need mental health screenings and treatment in order to address all the factors affecting their overall well-being.

We want to help your child thrive. Call us @ (phone number here) to make a plan that works for your family!

More great information is available at healthychildren.org
Frequently Asked Questions (FAQ) for Pediatricians

What might my role be as a pediatrician in school re-openings?

- Serve as COVID-19 content experts
- Communicate school re-entry best practices to families and school districts
- Help families keep up to date on immunizations
- Assist in preparing children with special needs to return to school or obtain school services
- Provide surveillance and treatment of child/adolescent illness
- Provide or refer for COVID-19 testing
- Assist with information about PPE
- Provide information about cleaning and disinfecting in the school setting
- Provide mental health screenings/treatment/referrals

Is it safe to send a child back to school?

There are national and state guidelines on how to safely reopen schools that minimize health threats to students and school staff. There is always a risk for contracting and spreading the virus once you engage with others within the community. Risks can be minimized by having safeguards in place in schools (e.g. physical distancing, good hand hygiene, wearing masks when feasible, monitoring for illness, adequate testing available in your community, sufficient contact tracing). The prevalence of COVID-19 in a community, the availability of these and other safeguards in each school, and the educational needs of the children are important factors in re-opening decisions. We have listed below some resources that can help with this decision-making.

Refer to:

AAP COVID-19 Planning Considerations: Guidance for school re-entry

CDC School Reopening Decision Tree

CDC updated guidelines for school re-openings

CDC guidelines on disinfecting
Frequently Asked Questions (FAQ) for Pediatricians (contd.)

Does a child need to wear a mask at school?
The decision to require masks for students and staff needs to be addressed by every school. Factors to consider are community prevalence of COVID-19, age, location of activity (e.g. indoor, outdoor, is there sufficient space for social distancing). The Arizona Department of Health Services (ADHS) has a dashboard that is updated regularly and provides data by zip code on COVID-19. This site can be helpful in determining the prevalence of COVID-19 in your community.

On June 23, 2020, Governor Ducey issued Executive Orders regarding school re-opening. In response to these executive orders, the Arizona Department of Education issued the following statement regarding masks:

All school districts and charters must develop and implement policies requiring face coverings, such as face masks or face shields, for all staff and students over the age of five until ADHS determines that face coverings are no longer necessary or recommended to contain the spread of the virus. The Executive Order makes exceptions for certain cases and individuals. For example, students may not need to wear masks when social distancing can be appropriately maintained at recess.

A full list of exceptions is available within the Executive Order. For specific information on the policies of school districts and charter schools in your community, please contact the districts and charter schools.

Here are some resources for you on recommendations about children wearing masks at school change.

Frequently Asked Questions (FAQ) for Pediatricians (contd.)

When should a child be tested for COVID-19?

Refer to:

General Testing Information:

* RT-PCR tests - assesses for active disease (preferred test for COVID-19 diagnosis)
* No serology tests (Antibody) have been approved by FDA for diagnostic purposes; generally reserved for assessing prevalence
* Supplies of tests increasing, but testing still limited, and in many areas, still prioritizing (not widespread or universal)
* Although not all kits have same specificity and sensitivity, please keep the following in mind:
  * Rapid tests (POC) are generally not reliable due to higher than acceptable false positive/negative rates
  * RT-PCR (through LabCorp and Quest) – involving nasal route (not saliva) are generally reliable and have been validated
What should I tell parents about the Multisystem Inflammatory Syndrome in Children?

Refer to:

What should I tell parents about activities such as athletics, marching band and chorus in school?

Refer to:

**Guidelines for Marching Bands: NFHS:** [https://www.nfhs.org/media/3812337/2020-nfhs-guidance-for-returning-to-high-school-marching-band-activities.pdf](https://www.nfhs.org/media/3812337/2020-nfhs-guidance-for-returning-to-high-school-marching-band-activities.pdf)
What should I tell parents about children with chronic diseases in school?

Plans should be based on individual circumstances and discussed with the pediatrician/specialists involved in daily care.
