ELMBOXKIT	6x6x5 in. box
RET PRICE	\$38

Make your own molds and then make your own soft bait lures with the biodegradable rubber.

Why Biodegradable Lures?

Biodegradable fishing lures won't hurt the fish. It's digestible and dissolves in the water. Plus the fish are attracted to the dissolving lure, making it even easier to catch that big fish.

The old style plastic lures or other synthetic rubbers can be replaced with something better for you, better for the environment, and better for catching fish. Unlike the plastic or other rubber lures, EcoLureMaker rubber and mold making material are safe for you and the environment.

Why EcoLureMaker Lures?

- Digestible by fish.
- The rubber is designed to attract the fish.
- Degrades in any water. Lasts an hour or more in most fishing conditions. Long enough to fish, short enough to leave the fish safe.
- Easy to make & use.

With the EcoLureMaker Kit you make your own biodegradable fishing lure to catch that big fish.

Why Make Your Own Soft Bait Lures?

You know the waters and you know the fish. And with your own fishing lure making kit, you can make your own soft bait lures any time.

Much like fly tying, the ability make your own soft bait lures lets you make the lures the way you want.
