

Care guide

Leopard gecko

Congratulations on your new pet!

Here are some quick tips to get you started on the right track. Tip #1 even though you really want to, try to let your pet settle in and get use to you. So give them about a week or until they are eating regularly before handling. Tip # 2 these geckos are insectivore so they will eat almost any insect they can over power. Final tip, when you do start handling your gecko it's all about building a relationship. Building threads of trust and become that really comfortable place for your gecko to hangout on and explore their new world. We strongly recommend not cohabiting these animals.

What you need:

- two hides
- terrestrial enclosure (in other words they're walkers not climbers)
- heat pad (in the winter)
- Shallow water bowl

Setup:

- Hot side of 88 - 92 degrees this should be a humid hide to aid in shedding
- Cool side of 80 degrees
- Low humidity
- Hide on each side

Disclaimer: This sheet is just what works for us it isn't the only way to keep your animal.

Care guide

Crested/Gargoyle gecko

Congratulations on your new pet!

Here are some quick tips to get you started on the right track. Tip #1 even though you really want to, try to let your pet settle in and get use to you. So give them about a week or until they are eating regularly before handling. Tip # 2 these geckos can be fed the fruit powder diet or powder and insects. Final tip, when you do start handling your gecko it's all about building a relationship. Building threads of trust and become that really comfortable place for your gecko to hangout on and explore their new world. We strongly recommend not cohabiting these animals.

What you need:

- Lots of foliage
- Shallow water dish
- Arboreal enclosure
- heat pad maybe needed to place on side of enclosure if ambient temperature is under mid 60s.

Setup:

- Ideal temperature high 60s - mid 70s
- High humidity (mist daily)

Disclaimer: This sheet is just what works for us it isn't the only way to keep your animal.
