## Math Strategies

4-Step Process for Word Problems:

1. Write down given numbers with units.
2. Write down the correct formula.
3. Fill numbers into formula.
4. Calculate and convert to correct units.

Disinfection formulas use million gallons (MG):

- Move decimal 6 places to the left from gallons value $\bigcirc$ 150,000 gallons $\boldsymbol{\rightarrow} \mathbf{0 . 1 5} \mathbf{~ M G}$

Change chlorine percentage to a decimal:

- Move decimal 2 places to the left from percent value
- $\mathbf{1 5 \%} \rightarrow 0.15$
- $\mathbf{5 \%} \rightarrow 0.05$
