

<b>Stoneware Clay</b>		<b>50 lbs</b>	<b>100+</b>	<b>250+</b>	<b>500+</b>	<b>1000+</b>	<b>2000+</b>
price per 100 #							
<b>GoldArt cone 4-10 buff stoneware &amp; Goldart With grog cone 4-10</b>		\$36.00	\$56.00	\$52.00	\$48.00	\$46.00	\$44.00
Smooth throwing clay popular with area schools							
<b>DSM (Reitz)3.5% or 7.0% grog cone 6-10</b>		\$36.00	\$56.00	\$52.00	\$48.00	\$46.00	\$44.00
A very good throwing body and sculpting with higher grog. Gas and oxidation							
<b>PGM 3.5% or 7.0% grog cone 8-10</b>		\$36.00	\$56.00	\$52.00	\$48.00	\$46.00	\$44.00
Iron added to a very good throwing body, Toothier than DSM							
<b>Paoli Stone 3.5% or 7.0% grog cone 6-12</b>		\$36.00	\$56.00	\$52.00	\$48.00	\$46.00	\$44.00
A great smooth throwing body, Great for woodfire, oxidation							
<b>MTM 5% grog cone 4-7</b>		\$36.00	\$56.00	\$52.00	\$48.00	\$46.00	\$44.00
Toothy red stoneware. Rich, dark brown at higher cone.							
<b>Earthenware Clay</b>							
<b>Redart or Redart with grog cone 04-06</b>		\$36.00	\$56.00	\$52.00	\$48.00	\$46.00	\$44.00
A smooth terracotta body suitable for all forming techniques							
<b>STND105 ^06- ^04</b>		\$38.00	\$60.00	\$56.00	\$52.00	\$50.00	\$48.00
Standard Ceramics white earthenware							
<b>Specialty Clays</b>							
<b>Raku 17% grog cone 10</b>		\$36.00	\$56.00	\$52.00	\$48.00	\$46.00	\$44.00
Formulated for the Raku process and suitable for sculptural work.							
<b>RAKU III smooth w/Kyanite ^ 10</b>		\$36.00	\$56.00	\$54.00	\$50.00	\$48.00	\$46.00
<b>Porcelain Clay</b>							
<b>EPK Porcelain cone 10</b>		\$36.00	\$56.00	\$52.00	\$48.00	\$46.00	\$44.00
Good throwing porcelain made with domestic kaolin.							
<b>Grolleg Porcelain cone 10 white</b>		\$44.00	\$82.00	\$78.00	\$74.00	\$72.00	\$70.00
Traditional porcelain body good for throwing and hand building.							
<b>Paoli Bclay cone 10 white</b>		\$40.00	\$70.00	\$66.00	\$62.00	\$60.00	\$58.00
smooth porcelain- stoneware clay body With 8% silica sand

## CORELITE KILN SHELVES CONE 10, ENERGY EFFICIENT AND LIGHTWEIGHT.

CORELITE is a high thermal shock resistant extruded refractory material based on a rich mullite/cordierite composition, suitable to cone 10 firing temperatures. The hollow shelves are available in many shapes and sizes, including: rectangles, rounds, half-rounds, octagons, and decagons. \* Not recommended for woodfire or Raku.

The rib was one of the first tools that Michael Sherrill started making for himself and then shared with others. A rib is one of the most basic and frequently used tools in clay. Because it acts as an extension of the potter's own hand, it should function well and be a joy to use.

Sherrill Mudtool ribs are made from a flexible material that is considered the "stainless steel" of plastics. Unlike rubber, this material will not develop burrs or cracks. In fact, these ribs will burnish themselves as you use them, so, the more you use them the nicer they become.

Available in six shapes, these ribs cover a lot of what hand builders and throwers need from a rib. Each rib shape is available in four degrees of hardness; from very soft to very firm. You choose the shape and hardness that suits your clay and your working style.

**VERY SOFT** 

Great for compressing slabs, burnishing rims, chamois, and handbuilding.

**SOFT FLEX** 

Perfect for smoothing, burnishing, porcelain, throwing, and handbuilding.

**MEDIUM FLEX** 

Great for compressing bottoms, burnishing, trim marks, throwing, and handbuilding.

**FIRM FLEX Still** 

Flexible but Stiffer. Great for high burnish and throwing large work.

Shape	Flexible Ribs	Dimensions
0		2.75" x 1.44"
1		3.5" x 1.75"
2		2.88" x 2.5"
3		5" x 1.94"
4		4.19" x 2"
5		4.19" x 2"

## Small Platter Rib

Long and lean, the **Small Platter Rib** is designed to give good compression when you are making plates and platters enabling you to properly compress the clay and avoid those cracks that sometimes develop. They are made with a stiff polymer but still offer some flexibility. The Small Platter Rib is particularly good for making shallow pasta-style bowls.

All of our polymer ribs are made of a unique flexible material, which is resistant to cracking and the formation of burrs. We've found that with general use this rib material becomes burnished over time. Each polymer rib shape is available in a variety of hardnesses.

## Large Platter Rib

Long and lean, the **Large Platter Rib** is designed to give good compression when you are making plates and platters enabling you to properly compress the clay and avoid those cracks that sometimes develop. They are made with a stiff polymer, but still offer some flexibility.

All of our polymer ribs are made of a unique material, which is resistant to cracking and the formation of burrs. We've found that with general use this rib material becomes burnished over time. Each polymer rib shape is available in a variety of hardnesses.

## Large Bowl Polymer Rib

**Large Bowl Rib** is the big brother of the [Small Bowl Rib](#). It is designed to give as many radius sweeps on the clay as possible. With a smaller curve in the front and bigger curve in the back, this is a workhorse of a rib. Especially if you are throwing big pots!

All of our polymer ribs are made of unique flexible materials that are resistant to cracking and the formation of burrs. We've found that with general use these ribs become burnished over time. Each polymer rib shape is available in variations of flexibility.

■ Yellow - Soft

■ Green - Medium

Whether you are throwing clay on the wheel, hand building or sculpting, the pottery rib is a classic and essential tool. It acts as an extension of the potter's hand to create shapes and surfaces that fingers alone can not achieve.

We believe our tools should not only function well, but should be pleasant to look at and a joy to use. Whatever you want to make, we've got you covered.

## Do·All Trim Tool

Japanese inspired & reimagined, as the name implies, we think this trim tool does it all. No more switching between dozens of trimming tools! Since his first visit to Japan in the 80's Michael fell in love with the simplicity of the Japanese style kanna trim tool. Subsequently, he spent years after altering and remaking his own trimming tools to better suit his various needs. These efforts have all combined into the elegant versatile pottery tool you see here. The sharpened more familiar kana spade shape provides an excellent precise cutting edge, especial for working the details around the foot of tea bowls, bowls and plates. The curl, provides a combination of all Michael's favorite loop tool shapes: both a broad surface for smoothing and a tight shape for detail trimming. We hope you enjoy discovering all the possibilities this tool provides.

## Dragtool

Japanese inspired & reimagined, as the name implies, we think this trim tool does it all. No more switching between dozens of trimming tools! Since his first visit to Japan in the 80's Michael fell in love with the simplicity of the Japanese style kanna trim tool. Subsequently, he spent years after altering and remaking his own trimming tools to better suit his various needs. These efforts have all combined into the elegant versatile pottery tool you see here. The sharpened more familiar kana spade shape provides an excellent precise cutting edge, especial for working the details around the foot of tea bowls, bowls and plates. The curl, provides a combination of all Michael's favorite loop tool shapes: both a broad surface for smoothing and a tight shape for detail trimming. We hope you enjoy discovering all the possibilities this tool provides.

Can't decide which Mudsponge to buy? Why choose at all! There is a reason we have all three!

White = fine, finishing

Orange = medium, super absorbant

Blue = course, general use workhorse sponge

The [White Finishing](#) is made with a tight-cell material and is less absorbent than the Blue Workhorse. It is excellent for finishing work, final detail and clean-up of surfaces and won't pull out grog or other materials in the clay body. Think of it like a chamois sponge.

The [Orange Absorbent](#) is the perfect throwing sponge. More absorbent than the White Finishing and the Blue Workhorse, it is the sponge Michael uses for throwing.

The [Blue Workhorse](#) is a great all-purpose sponge made of an open cell material that is very absorbent. We've shaped it like a potters rib to fit comfortably in the palm of your hand. Dyed with a natural pigment, the color will fade with use.

Natural sponges have been used by potters for years. However, the quality of natural sponges can be unpredictable and we try to be environmental conscious about what materials we use and the long term effects. Our sponges are made of a biodegradable and environmentally friendly material that is incredibly durable. Your Mudsponge comes to you compressed for economy of space and for the fun of watching them expand when introduced to water.

### **Flat Shredder**

### **Small Shredder**

### **Small Shredder Replacement Blades**

The **Small Shredder** is an indispensable tool for shaping and carving leather hard clay. For years you could find a tool like this at the hardware store. This type of rasp was originally designed to be used on wood, but clay people, sculptors and auto-body repairmen discovered how well the blade worked on other materials (like clay and auto body filler). The problem was the handle design. The handle would trap clay and get clogged up. Michael designed a new open blade shape as well as a comfortable ergonomic grip. It functions well, doesn't trap the waste clay in the tool and doesn't frustrate the user. An added benefit is the tool mark, it leaves a handsome textured surface in the clay.

## **Diamond Sanding Products**

The 3.5 inch x 2.25 inch 3M Hand Pad electroplated dot pattern diamond material is woven into the structure of the pad preventing diamond dots from coming loose from the handpad for longer life and grinding surface. The ergonomic foam backing makes grinding comfortable and easy to grip. Great for larger sanding and polishing challenges.

The Perfect Tool for cleaning up and smoothing out the bottom of your ceramic ware. Best results are if you use water to lubricate the sanded surface as wet sanding cuts down on dust created. Always wear a respirator or N95 dust mask when sanding ceramics. We recommend wet sanding starting with the 60 Grit, and working your way to the higher grit numbers. At 1800 grit your pieces will feel smooth as glass!

Works amazing on a Giffin Grip! Polish your functional mugs, bowls, and plates smooth so it doesn't scratch your wood or glass tables! Smooth out a glaze bubble, glaze drip, or rough lip on a thrown mug or bowl.

60 Grit (green)  
120 Grit (black)  
200 Grit (red)  
400 Grit (yellow)  
800 Grit (white)  
1800 Grit (blue)
