OWNER OPTIONS – CONTENTS (11-11-2025)

Page.

OWNER OPTIONS OVERVIEW

The **OWNER OPTIONS** menu allows the owner to set various parameters on the **ONIS** which will provide the users with a consistent secured device across the fleet.

Most options are a "check box" to enable / disable and each option has an adjacent help option with the " ? "

Set check box's to enable / disable options.

OWNER OPTIONS MENU

IMPORT GEOFENCE SPEED ALERTS

IMPORT GEOFENCE SPEED ALERTS

The ''Import Geofence Speed Alerts'' allows the owner to import data that has been configured on a PC.

Typically, this data will have been configured using the PC version of *OziExplorer* and then saved in the OziExplorer waypoint format.

The owner can then import this waypoint data and the *ONIS* will then perform the calculations to convert the waypoint data into the CSV format required by the *ONIS*. The owner has the choice of either appending the data to the existing data set, or replacing the data entirely.

Each option has a " ? " which outlines the requirements of the import data file.

IMPORT & EXPORT DATA
