

Electric Yacht Surface Mount Throttle Controls

p/n 01006 (Dual) and 01008 (Single)

The Electric Yacht surface mount throttle controls are designed for installation on a flat horizontal surface. They are most commonly installed on catamarans and in the pilot house of monohull power or sailboats. Lever configurations can be single or dual.

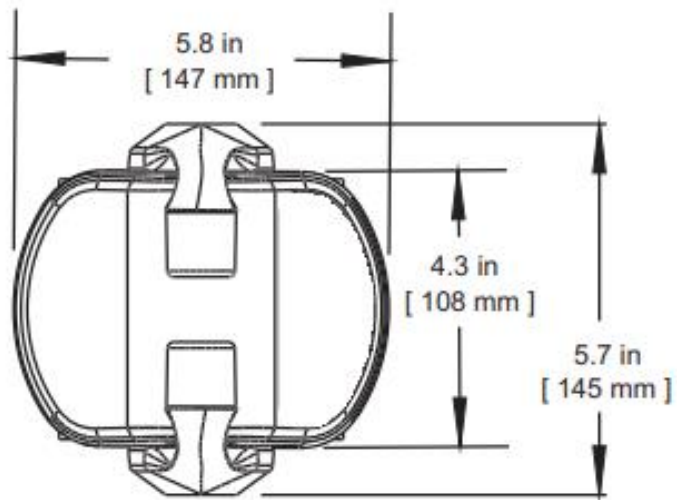

Electrical connections are to terminal blocks. Pre-fabricated cables are supplied with the unit (not shown).

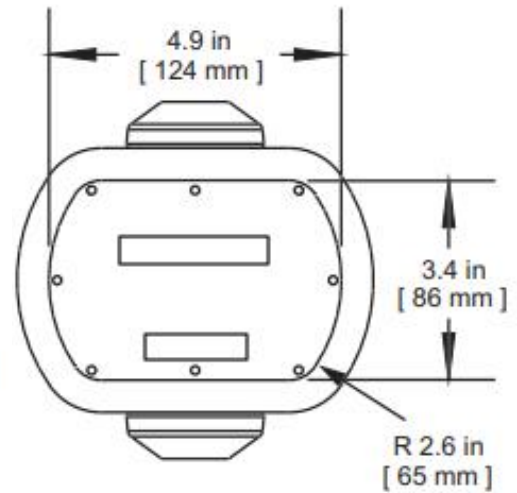

Mounting requires that a hole is cut into the panel and that there is a minimum of 2.6" (66mm) of clearance below the mounting surface. Brackets are provided to secure the unit in place.
