

# **KHUBA SOIL CONDITIONER**

## **DESERT & ARID LAND FARMING**

**SAVE WATER, AVOID PERCOLATION  
& SIMULTANEOUSLY PROVIDE  
NUTRIENTS FOR FARMING**

- For Mechanized farming create pit of about 2 feet in depth considering the depth of tilling and soil rotation.
- For smaller crops reduce depth of the pit.
- To safeguard / not to disturb bottom layer of Khuba Soil Conditioner which is retaining water & also providing nutrients to plant.
- Compact & Level the ground.

**Spread Khuba Soil Conditioner evenly, with minimum thickness of 1inch for depth 12 inches and 1 ½ inch for higher depths and for land with sand & rocks increase the thickness to minimum 2 inches.**

## **SPREAD EVENLY & USE THICKER LAYER FOR BORDER.**

- Create 1 ½ inch thick layer for deeper pits.
- Create 1 inch layering for depths of 12 inch.
- For sandy areas having rocks increase the layer to 2 inch.
- If percolation persists, identify and apply till the percolation stops.

## LARGE FARMS OR SMALL PATCHES AS REQUIRED TO SUIT THE CROP.

- Refill sand without disturbing the layered Khuba Soil conditioner.
- Fertilize with Khuba Soil Conditioner plants while seeding the conventional way.
- **For better results** add about 10% of Khuba soil conditioner to sand being refilled.
- Such fields will require bare minimum fertilizers to advance initial stages of growth.

# CREATE & HAVE LAKES IN FARMS TO RETAIN RAIN WATER KHUBA LAKE SEALANT

Minimum 2 inch layering

# BENEFITS

- Water & nutrients are scarce in desert.
- Breathability for easy exchange of oxygen / carbon which avoids drowning of plants due to excess water (Impact of use of plastic liners )
- video: [Khuba Soil for Desert farming. - YouTube](#)
- Being Hygroscopic nature it draws water from air and keep the plant surrounding wet and cool.
- Retains provided water & reduces consumption.
- Planting trees in pits made like this will lower required fertilizer for minimum 2 year.
- Our product retains precious water and simultaneously provide essential nutrients to plants for better growth.
- Creates conducive environment for growth and higher yield.
- Refer our detailed PDF to know other benefits.
