

<b>FIT 176 A Test for IgG1-4 and C3d</b>		<b>Sample Type: Bloodspot</b>	
Name:	LAST NAME, FIRST NAME	Date Drawn:	06/01/2023
Date of Birth:	01/01/2000	Date Completed:	06/03/2023
Accession Number:	11111	Provider:	Provider

<b>List of Restricted Foods:</b>	
<b>4+ Reactions:</b>	Wheat, Gliadin Wheat, Gluten Wheat, Whole Pineapple
<b>3+ Reactions:</b>	Egg Yolk Salmon
<b>2+ Reactions:</b>	Egg White Banana Yeast, Baker's Yeast, Brewer's

<b>Laboratory Information:</b>	
KBMO Diagnostics 4 Business Way Hopedale, MA 01747 Jia He, PhD, NRCC Laboratory Medical Director	Phone: 617-933-8130 Fax: 617-933-7660 E-mail: LabSupport@KBMODiagnostics.com CLIA ID #: 22D2095272 <b>Patent #: 8309318</b>

This test was developed and its performance characteristics were determined by KBMO Diagnostics, LLC. It has not been cleared by the U.S. Food & Drug Administration (FDA).

Name: LAST NAME, FIRST NAME  
 Provider: Provider  
 Sample Type: Bloodspot  
 Date Drawn: 06/01/2023  
 Date Completed: 06/03/2023

Severe Reaction 4+  
 High Reaction 3+  
 Moderate Reaction 2+  
 Mild Reaction 1+  
 No Reaction Negative

 Bloodspot

**Gut Barrier Panel**

KBMO has created a unique Gut Barrier Panel which in recognition that leaky gut occurs across a spectrum we have included the following gatekeeper markers: Candida, Zonulin and Occludin. For each marker, we measure IgG 1-4 /C3d in addition to IgA 1 and 2.

Gut Barrier Panel		
	IgG1-4+C3d	IgA1-2
Candida	Negative	Positive
Zonulin	Positive	Positive
Occludin	Negative	Negative
LPS	Positive	Positive

Candida:  
 we measure and use any candida overgrowth in the stomach/dysbiosis as a precursor to leaky gut occurrence

Zonulin:  
 Is a marker of intestinal permeability, otherwise known as leaky gut. If a patient has elevated Zonulin levels, the normal regulation of the tight junctions is compromised. This Zonulin marker is unique to KBMO please follow the link for more information:  
<http://kbmodiagnostics.com/zonulin-test/>

Occludin:  
 is a marker of tight junction stabilization and optimal barrier function. Elevated occludin indicates that the tight junctions are breaking down.

Lipopolysaccharides (LPS) are a major structural component of the outer membrane of gram-negative bacteria. Elevated levels of antibody against LPS may be indicative of Leaky Gut Syndrome and other gastrointestinal inflammatory diseases.

GB Panel Interpretation:  
 If any of the 8 markers are positive, we recommend to consult your provider with regards to a gut healing protocol.
