

## Our Story

Recycle Wise Consulting was born out of the intent to provide honest, specialist, tailored advice and project management for our clients, utilising a broad skill set developed from working in private and consulting sectors in the waste and recycling industry.

## Services

- Project management
- Land improvement
- Land rehabilitation
- Regulatory approvals
- Land regeneration
- Contract management
- Strategic advice
- Site identification
- Market analysis to support decision making
- Repurposing construction waste

We work with our clients to provide strategic advice through site identification and market analysis to inform development and investment decisions for recycling infrastructure.

We also source material for soil reuse to assist with land improvement and regeneration projects, managing the full project lifecycle from concept to the site becoming operational.

Recycle Wise have the expertise to manage land rehabilitation projects, assisting with the movement of materials into and out of a project site to achieve desired outcomes, and procuring supply of surplus soil from excavation and recycled construction waste products such as aggregates, sands and top soils to complete works.

# Land Improvement and Regeneration

We can assist landowners with improvement of land features such as drainage, soil compaction, weed infestation, and poor soil quality, and improve overall land usability which might be hindered by uneven ground surface.

We liaise with environmental and planning regulators to obtain suitable approvals, partnering with landowners, ecologists, conservationists and local aboriginal parties where required, to ensure works that are undertaken protect and enhance biodiversity and cultural heritage values.

## Strategic Advice

Our team can undertake market research and competitor analysis to provide strategic advice to organisations looking to expand their current recycling operations or seek out new sites. We can also work in an advisory/audit capacity where we provide third party verification of testing, waste classification and treatment efficiency at any stage of a project.

Through over a decade of experience, our team can assist organisations with identifying areas for operational improvement to increase efficiency and compliance, and reduce unnecessary operational or project costs.

We can also work with clients to contribute to due diligence assessments for mergers and acquisitions by providing both market and competitor insights as well as regulatory pathway or commencement of lease advice for adequate risk assessment so that the client can assess their options.
