LASH LIFTS & AFTER CARE

Stylist Availability

MONDAY TUESDAY WEDNESDAY THURSDAY FRIDAY SATURDAY SUNDAY

THE FIRST 24 HOURS

A typical lash lift application life span is
4-6 weeks

By following these guidelines you will have better retention which means longer lasting lash lift

- Do **NOT** get your lashes wet within the first 24hrs
- Do **NOT** use waterproof Cosmetics on your lashes
- Do **NOT** use mechanical lash curlers on lashes
- Do **NOT** expose lashes to direct steam or heat

What is a lash lift?

A lash lift is a semi-permanent lift and curl to either loosen or tighten the natural lashes curl pattern. It is achieved by using a lash rod that we temporarily adhere the natural lashes onto and perm solution formulated for lashes.

What is the perm made of?

The perm is made up of Thioglycolic Acid, along with other ingredients, and is used with a setting lotion and keratin nourisher for the lashes.

Your First Wash

Wash your face as normal, avoid getting soap onto the lashes. Rinse face, take one pump of our specially formulated lash foaming cleanser, apply to lashes in a downward motion. If possible, use a soft bristle lash brush to remove makeup or buildup around the lids and between the lashes.
