## THE FIRST 12 HOURS

A typical lash fill application life span is two weeks

By following these guidelines you will have better retention which means longer lasting lashes

- Do **NOT** get your lashes wet within the first 12hrs
- Do **NOT** use waterproof Cosmetics on your lashes
- Do **NOT** use mechanical lash curlers on lashes
- Do **NOT** expose lashes to direct steam or heat

### Things To Avoid

. When wearing lash extensions you should avoid: Getting your lashes wet the first 12hrs, wearing oil based makeup around the eyes, facials, sweating, sleeping directly on your face on the lashes, pull/pick at or constantly touching lashes ,

### What is the glue made of?

The adhesive is a **cyanoacrylate** which is a **sensitizer** that contains **Ethoxyethyl, Ethyl, Rubber Toughened, Hydroquinone** applied to close to the skin or with to much adhesive one can develop irritations from improper exposure which can be mistaken for allergies; fixing the exposure can relieve irritations if no allergy has developed

### Your First Wash

Wash your face as normal avoid getting soap onto the extensions rinse face take one pump of our specially formulated lash foaming cleanser apply to lashes in a downward position if possible use a lash brush to remove makeup or buildup in the lashes
