TOTAL FINISHING SUPPLIES

FrankenSTAIN iQ™

INTAKE QUAD / CYCLOPS® + VIPER®

TotalFinishingSupplies.com

Three stain colors. One flush station.

Even stain application. Fast color changes. More usable material reclaimed.

Shown with optional rotary selector kit, siphon hoses, pail agitators, and XL powder cart

FOUR INTAKES

Select from three stain colors and one compatible water or solvent flush supply.

EVEN STAIN APPLICATION

The CYCLOPS® 1:1 diaphragm pump pairs with a low-viscosity stain, an even fan, and minimal atomizing air.

SMOOTH MATERIAL FEED

Virtually pulse-free flow, inline filtration, and no separate fluid regulator needed in this spray setup.

KEEP STAIN MIXED

Optional pail agitators help keep stain uniform and ready for the next color.

CHANGE COLOR IN THREE SIMPLE STAGES

01 RECLAIM

Return most usable material to its original container.

02 FLUSH

Select the flush supply and direct flushing waste to a waste bucket.

03 LOAD

Select the next stain color and load the system.

Typical flush/load time: 10-20 seconds, as reported by Total Finishing for this setup. Actual time depends on stain, hose volume, and cleaning requirements. Typical tip selection: 12-154 or larger; confirm the tip for your application.
