

Acknowledgement:

Today we stand on the shoulders of our Elders and Ancestors. It is because of their knowledge and hard work we are able to continue learning and sharing traditional moose hide knowledge and teachings.

We get to learn and practice moose hide tanning because our Elders shared knowledge through teaching, language lessons, recordings and publications. We are thankful for all that they have done.

It is time for us to carry forward our traditional ways.

Today, we thank you, as a knowledge learner you have decided to learn and carry forward the traditional knowledge of moose hide tanning.

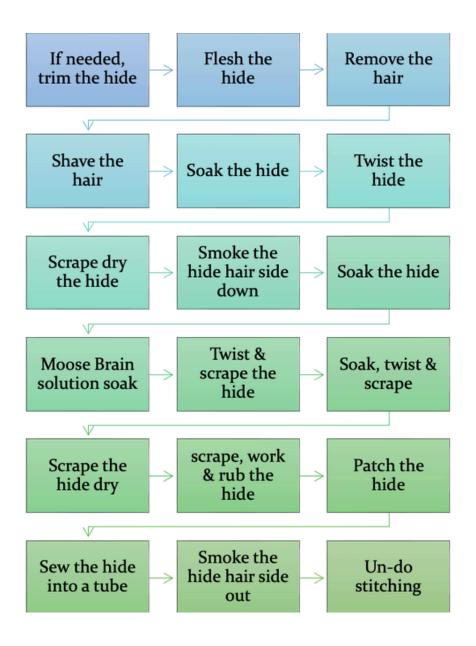

Koht'aenn kenaege' dohduldiixi.

I hope you will learn the People's language.

Denae k'eh dohduldiixi.

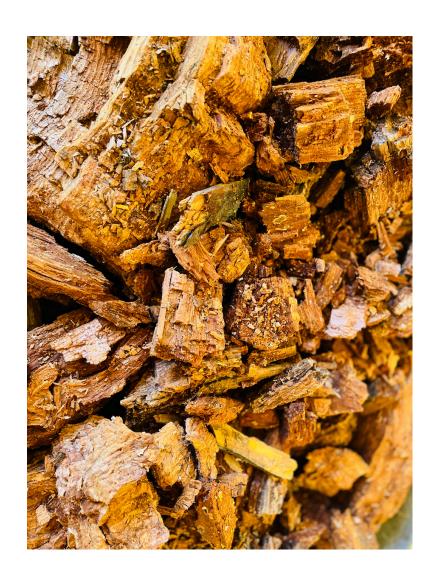

I hope you will learn the Denae way.

C'EZES GHA GHESTNAA

Knowledge Shared by: Late Katie John, Late Ruby Sinyon, Elder Lena Charley & Elder Laura Hancock

TATSAAYE' ŁTSOGHI

TATSAAYE' ŁTSOGHI

(PARTIALLY ROTTEN BLACK SPRUCE):

FOR ALL SMOKING PROCESSES YOU WILL USE ROTTEN

SPRUCE. BOTH WHITE SPRUCE AND BLACK SPRUCE WILL

WORK FOR SMOKE. THE IDEAL ROTTEN WOOD WILL BE AN

ORANGE-RED COLOR, MAY HAVE SPECKS OF WHITE MOLD,

AND A SNAP WHEN BROKEN.

IT IS BEST TO LEAVE YOUR ROTTEN WOOD IN LARGE
CHUCKS. WHEN THE WOOD IS IN LARGER PIECES THE
SMOKE WILL LAST LONGER AND THE WOOD WILL BURN
SLOWER.

YOU WILL NEED TO GATHER SEVERAL GALLONS OF ROTTEN
SPRUCES TO SMOKE A MOOSE HIDE. SOMETIMES YOU WILL
FIND DRY AND DAMP WOOD. IF THE ROTTEN WOOD IS
DAMP, YOU WILL NEED A FEW DAYS TO DRY OUT THE
WOOD. SO, MAKE SURE TO COLLECT YOUR ROTTEN WOOD
DAYS BEFORE SMOKING THE HIDE.

C'ETSIGHAAN' FERMENTED MOOSE BRAIN

C'ETSIGHAAN' TU'
FERMENTED MOOSE BRAIN WATER

C'ETSIGHAAN' (MOOSE BRAIN)

THERE ARE 3 WAYS TO STORE MOOSE BRAIN WHEN TANNING HIDES; FRESH, FERMENTED, OR DRIED.

STORING FRESH C'ETSIGHAAN':

C'ETSIGHAAN CAN BE STORED IN THE FREEZER.

ON THE MORNING YOU PLAN TO MAKE BRAIN SOLUTION WATER REMOVE C'ETSIGHAAN' FROM THE FREEZER AND THAW AT ROOM TEMPERATURE.

ONCE UNTHAWED THE C'ETSIGHAAN' WILL NEED TO BE CLEANED AND PREPPED FOR THE C'ETSIGHAAN' TU' (MOOSE BRAIN WATER).

STORING FERMENTED C'ETSIGHAAN':

STORE IN A GLASS AIRTIGHT CONTAINER AND KEEP OUT OF DIRECT SUN LIGHT. THE GLASS CONTAINER CAN BE STORED OUTSIDE OR IN A SHED UNTIL NEEDED. OUR ELDERS WOULD DIG A HOLE IN THE GROUND AND PUT JARS OF C'ETSIGHAAN' IN THE HOLE TO KEEP THEM COOL AND IN THE SHADE.

*IF TAKEN CARE OF WELL-FERMENTED C'ETSIGHAAN' WILL LAST LONGER THAN A YEAR.

STORING DRIED C'ETSIGHAAN': RECOMMENDED METHOD (MOST TRADITIONAL)

STORE IN A CANVAS BAG UP HIGH IN A TREE, SHED OR GARAGE.

WHEREVER YOU DECIDED TO STORE THE BAG IT NEEDS TO BE COOL

AND IN THE SHADE. THE BRAIN WILL FERMENT BEFORE DRYING. LIKE

FERMENTED BRAINS YOU WILL ONLY NEED A 1/3 OR ½ A CUP TO TURN A

HIDE.
