| <p>Note: The actual usage of these transformers does not have to correlate with the size of the house, but rather with actual water consumption. The latter correlates much better with the number of dwellers, e.g., a smaller family that occupies a large house will need a correspondingly smaller and cheaper Memon transformer.</p>             |       |                          |       |

Memon devices have not been evaluated by the FDA and, therefore, no health-related claims can be attached to these.

\*For standard situations and average electric consumption. For unusually large areas or excessive power consumption, stronger custom units can be ordered and priced on demand.

Note:

- 1. All of the transformers are removable and transferrable in case of moving, or replacing the target of the items. However, rotating devices on a short-term basis between residence, office, car, etc., is counterproductive.
- 2. Based on our experience with bioresonance testing and clinical observations, our instructions concerning the installation of residence or office units on circuit breakers have indicated an even higher effectiveness than the ones provided by the company. All of our customers will receive our instructions.
- 3. The installation process is extremely simple and can be completed by a non-electrician within one minute's time.

\*\*\* Version – 1: Adheres to a circuit breaker box. \*\*\*

This is the original version that is installed via its adhesive surface on the exterior of a circuit breaker door, within only a few seconds by a lay person.

### Memon installation instructions for residence or office electric network.

1. Identify the main electric circuit breaker box
2. Peel off the cover off the Memon transformer and attach the transformer **very firmly** to the circuit breaker door. The door must remain in a shut position.  
*See these photos*

3. Before letting go of the transformer make sure it is attached strongly to the circuit breaker box door
- Place carton box filled with newspapers or other soft material on a floor under Memon, in case if the transformer may ever become loose and fall.

\*\*\* Version – 2: Plug in an outlet in any room or area in an apartment, house or office. \*\*\*

It is based on the same protective mechanism and power as the original version.
