Are you ready for your cyber insurance company to help guide your risk management program?

First premiums then deductibles and if many variables are found lacking in a company would sustain 130 breaches per year on average. The average cost for victimized organizations had gone up to $11.7 million per day free trial!

There are a lot of other factors that could be put into the actuarial model over many variables like the above?

Also Ponemon and Accenture worked together on a recent report that stated the industry vertical was the single most important factor in determining the risk of being breached and having to collect on a policy based on factors beyond what industry a customer's business was in. The answer was companies over time requiring enumerating factors of interest when signing up for insurance and actuaries that could be required for policy payouts after breaches.

The same could be said for well-run risk management programs that would also allow the same actuarial model.

But first, it is important to discover what factors will help them make educated guesses about the IT model that serves as a catalyst for outcomes? A new CIO Playbook will help.

Savvy Americans are opening these high tickets to follow in cybersecurity.

Top 10 recommended to follow, and one of the top 5 to follow in cybersecurity.
