

Optional - Winter & Spring Pool Service:

The Winter & Spring service is an optional service we provide to help reduce the risk of algae blooming in your pool while the pool is closed. These services are available for all above ground and in-ground pools with mesh or solid covers.

*These services do not 100% guarantee your pool will open clean and clear, however it is the best way to reduce the risk of algae blooming while the pool is closed during the winter and spring months. The Repair Guy/TRG Pools does not guarantee this service will prevent your pool from turning green while closed.

The Winter & Spring service includes the following:

- pump excess water from solid covers when possible (if water is frozen we can't pump off water)
- adjust & tighten the cover, if needed
- add shock & algae 30 (1 gal liquid shock & 1 bottle algae 30 per 10k gallons)
- circulate the chemicals using our pump

Each service is \$150 plus chemicals & tax (shock & algaecide used are based on gallons in pool). *Military and First Responders get their discount off the services and chemicals.

Please check the box if you would like the Winter and/or Spring service and return this form with your pool closing paperwork or reply by email to shannon@therepairguy313.com.

A card on file is required to reserve this service. You will get an itemized receipt by email once the service is finished and the card is charged.

☐ Winter Service: We will perform one visit, at our discretion, during the timeframe of early November to early December and the following services will be provided: Pump off excess water from solid covers, adjust & tighten cover if needed add shock, algaecide, and circulate the water using our pump. All chemicals used are invoiced in addition to the \$150 labor charge.

☐ Spring Service: We will perform one visit, at our discretion, during the timeframe of mid-March to early April and the following services will be provided: Pump off excess water from solid covers, adjust & tighten cover if needed add shock, algaecide, and circulate the water using our pump. All chemicals used are invoiced in addition to the \$150 labor charge.
