

Single-Mode 100GBASE 4WDM-40 QSFP28 Transceiver RoHS Compliant

Features

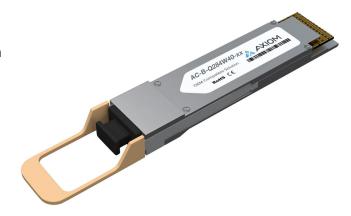

- Supports 103Gbps
- Single 3.3V Power Supply and Power dissipation

Standard: <4W

- Up to 40km over SMF with FEC on host
- RoHS-6 compliant (lead-free)
- · Operating case temperature range of

Standard: 0°C to 70°C

- Four 25Gbps Cooled DFB LAN-WDM lasers on transmitter side
- · APD and TIA array on the receiver side
- 4x25G electrical interface
- Duplex LC receptacles
- I²C interface with integrated Digital Diagnostic
 Monitoring
- Safety Certification: TUV/UL/FDA
- RoHS Compliant

Applications

- 100G 40km applications
 with FEC on host side
- 100G Datacom& Telecom connections

Product Description

Axiom's AC-B-Q284W40-xx QSFP28 transceiver modules are designed for 100 Gigabit Ethernet links over 40km single mode fiber. Digital diagnostics functions are available via an I²C interface, as specified by the QSFP+ MSA. They are also compliant with 100G 4WDM-40 MSA.

Note4: Average launch power, each lane (min) is informative and not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.

Note5: Even if the TDP < 1.0dB, the OMA (min) must exceed this value.

Note6: Transmitter reflectance is defined looking into the transmitter.

Note7: Eye mask hit ratio is 5E-5.

Note8: Average receive power, each lane (min) is informative and not the principal indicator of signal strength. A received power below this value cannot be compliant; however, a value above this does not ensure compliance.

Note9: The receiver shall be able to tolerate, without damage, continuous exposure to an optical signal having this average power level.

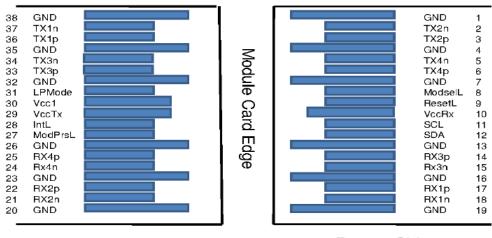

Note10: Receiver sensitivity (OMA), each lane (max) at 5E-5 BER is a normative specification.

Note11: Measured with conformance test signal at TP3 for BER = 5*10⁻⁵.

Note12: Vertical eye closure penalty, stressed eye J2 Jitter, stressed eye J4 Jitter, and SRS eye mask definition are test conditions for measuring stressed receiver sensitivity. They are not characteristics of the receiver.

^{1:} GND is the symbol for signal and supply (power) common for the QSFP28 module. All are common within the QSFP28 module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.

^{2:} Vcc Rx, Vcc1 and Vcc Tx are the receiver and transmitter power supplies and shall be applied concurrently. Vcc Rx Vcc1 and Vcc Tx may be internally connected within the QSFP28 Module in any combination. The connector pins are each rated for a maximum current of 1000mA.
