# Forever Free™ Fiber Collection

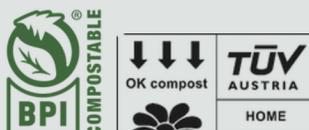

Forever Free™ Fiber Collection products are crafted from unbleached plant fiber derived from domestically grown Miscanthus grass—a rapidly renewable agricultural by-product—creating water resistant, freezer-safe takeout containers that perform without compromise. Every product has been upgraded with official BPI-certified molds to ensure fully compliant compostable labeling, and carries dual certification: BPI for commercial facilities and TUV Austria OK Home Compost for backyard bins.

By sourcing materials locally and eliminating petroleum-based linings, we deliver packaging that's domestically grown, locally sourced, clearly labeled, and truly ready to compost.

Unlike conventional fiber containers—which may carry non-labeling, hidden PFAS coatings, or non-compliant molds—Forever Free™ Fiber products are completely free of added PFAS, wax, and petroleum plastic linings. This makes them the ideal choice for takeout restaurants, cafes, and food trucks committed to transparency and circularity: your packaging won't contaminate compost streams, and your customers can trust the "compostable" claim. For more information on organic recycling and sustainable packaging decisions, visit [compostitall.com/learnhow](http://compostitall.com/learnhow).

# Forever Free™ Bamboo Collection

**Forever Free™ Bamboo Collection** products are crafted from sustainably sourced bamboo paper and lined with a low-carbon, bio-based PLA polymer, creating leak-proof bowls, cups, and boxes that are certified compostable in both home (TUV) and commercial (BPI) facilities. By choosing rapidly renewable bamboo over tree fiber and eliminating petroleum-based linings, we deliver high-performance food packaging that truly aligns with sustainable values.

Unlike traditional poly-lined paper products—which are often mistakenly viewed as recyclable or contaminated with PFAS/PFOS forever chemicals—Forever Free™ products are completely free of added PFAS, wax, and petroleum-based coatings. This makes them the ideal replacement for conventional food packaging, ensuring your compost streams stay clean and your environmental commitments stay intact.
