Quantum Resonance Body Scans

QUANTUM RESONANCE BODY SCANS – INTRACELLULAR FREQUENCY ANALYSIS

The Medicine Way is a body scanning software technology that is sensitive to the bio-energetic frequencies of the body. Because it is technology, it is considered “neo-biofeedback”. The Medicine Way uses headphones to detect the electromagnetic waveforms from the brain. It then decodes, analyzes, and displays the results that you can see on the computer screen. The body’s normal frequencies can be evaluated right down to the DNA, to locate abnormal areas that show stress or malfunction. Stress or malfunction could indicate acute or chronic pathologies.

There are four primary contributors to cellular malfunction, (i.e. disease or illness).

- Psychological – stress, anxiety, anger, depression, worry, frustration
- Spiritual – moral violations, beliefs and values, social disconnections, isolation
- Chemical – substance use, toxins, diet, dehydration, exposure
- Physical – posture, injury, amputation, surgery
