# WINDOW OF TOLERANCE

The window of tolerance and different states that affect you

# **HYPERAROUSAL**

- Abnormal state of increased responsiveness
- Feeling anxious, angry and out of control
- You may experience wanting to fight or run away

# **DYSREGULATION**

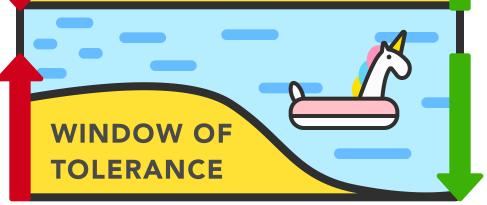

- When you start to deviate outside your window of tolerance you start to feel agitated, anxious, or angry
- You do not feel comfortable but you are not out of control yet

# **SHRINK**

your Window of Tolerance

Stress and trauma can cause your window of tolerance to shrink Think of the window of tolerance as a river and you're floating down it. When the river narrows, it's fast and unsafe. When it widens, it slows down and you:

- o are at a balanced and calm state of mind
- feel relaxed and in control
- o are able to function most effectively
- o are able to take on any challenge life throws at you

Meditation, listening to music, or engaging in hobbies can expand your window of tolerance

# **EXPAND**

your Window of Tolerance

#### **DYSREGULATION**

- You start to feel overwhelmed, your body might start shutting down and you could lose track of time
- You don't feel comfortable but you are not out of control yet

# **HYPOAROUSAL**

- Abnormal state of decreased responsiveness
- Feeling emotional numbness, exhaustion, and depression
- You may experience your body shutting down or freeze
