

Dear Lee

I want to thank you for your splendid work helping our companies get certified as an AISC erector and fracture critical endorsement for our fabrication shop. Not only did you help us with certifications but organizing our company to execute the program efficient from procurement through fabrication and erection made it a program that was extremely easy to integrate and apply to every job.

We would not have been able to accomplish this program without your help. All our staff's time is devoted to projects. Having you on board to produce and execute the program allowed our managers and supervisors to continue their busy schedule and apply the program to their work on the fly.

At the time of our AISC/QMC audit we had very few corrective actions. The auditors commented on how well the program was put together in addition to how well our company was following the program.

Please feel free to use me as a reference. I would definitely recommend your services.

Thanks

James N Buchan, President, Alliance Industrial Group Inc, Alpha Iron LLC
